A NEW HUMANITY WITHOUT MONEY

Structured, numbered version — English translation

1. Cover

1.1 A NEW HUMANITY WITHOUT MONEY.
1.2 Toward a Society of Cooperation, Technology and Universal Well-Being
1.3 From everyone, for everyone, always together
1.4 An urgent call to transform the future of humanity

2. Numbered index of sections

3 Introduction
4 My Story, Short and Precise
5 PART 1: The Beginning of the PROBLEM
6 Chapter 1: Money as the Root of Evil and of What Came After
7 Chapter 2: The Concentration of Power and the Birth of Resistance
8 Chapter 3: The Human Cost
9 Chapter 4: Why Previous Alternatives Failed
10 PART 2: THE SOLUTION EXISTS, IT IS REAL
11 Chapter 5: Vision of a New Humanity Without Money
12 Chapter 6: Guidelines for a Society Without Money
13 Chapter 7: Technology and Artificial Intelligence as Facilitators of Everything in Humans' Ordinary Life
14 Chapter 8: The Practical Transition: How We Get from Here to There
15 Chapter 9: Frequently Asked Questions and Objections
16 PART 3: THE CALL TO ACTION
17 Chapter 10: What Each Person Can Do
18 Epilogue
19 Appendix: Resources for Going Deeper
20 Invitation to Collaborate
21 Final Words
22 My Eternal Thanks

3. Introduction

3.1 With this attempt at a book, I only try to create in everyone who may read it the final idea that we must change the entire concept of money's existence in human life. Well, more than changing it, it must be eliminated completely. It must be eliminated because if we do not do it now, money will keep eliminating us, and this happens every day, worldwide. For example, perhaps you have heard the comment that more and more people can no longer keep studying, or working, or even living, and it is because they do not have enough money, or cannot have it or save it. Well, no matter what they do, they will not manage it. I am going to show you with some simple, real data, and based on the own experience of very many people. You may be one of those very many people whose life is being finished and destroyed by trying to stay on this wheel. It draws on exhaustive research into economies without money, including the work of Jacque Fresco and The Venus Project, current data on automation and AI (Goldman Sachs, the World Economic Forum), Universal Basic Income experiments, and the voices of thinkers such as Elon Musk, Bill Gates and Sam Altman on the future of work for humanity with the new technology and AI.

3.2 The proposal presented here in these lines, for each and every human being, is neither utopian nor impossible. It is the synthesis of decades of alternative thinking, applied to today's technological context. For the first time in human history, we have the tools to make a truly new society real, but without the harmful problems already caused by a few, who have profited to the point of excess through unrestrained gains, endless profit from every kind of business built on the basic and elementary needs of all human beings, such as water, electricity, a roof, food and medicine; this unchecked fever or addiction to money and the power it grants, a power that blinds judgment, to the point of feeling they have a different and superior power over other human beings, causing abuse, pain, illness, crime, and whatever else you think worth mentioning. In this book, which is from everyone for everyone, I have only started it, but we must all contribute and keep on laying the truth bare, even if it hurts someone. Profit and endless gain placed above the human being must come to an end, and everything can and must be different, by man for man. I am not talking about politics or social revenge against any class or particular type of people; that is not what this book is about. It is only about a vision and a mission that we must all develop and carry out. And I assure you that even those who will feel affected will come to share this idea. They will believe they are affected because they will think their money is going to be taken from them, but they are mistaken. In fact, they can keep all that money and store it in their homes and private vaults, since that money is of no use in the new society without money that is going to be built, with the contribution and care of all those who will keep doing their jobs, or changing to work at what they always dreamed of doing. That is how we must work for others. And if you were never able to learn the specific profession you always dreamed of, because you could not study it for lack of money, well now you will be able to, and it will be in the area you want, in what fulfills you.

3.3 And you will study it, and teachers who are glad to teach you will teach you, because they dreamed of teaching others. And so all capable human beings will work for others, and not for money. In exchange, all human beings, by their own right, receive what they need to live well and feel complete, so that nothing material or spiritual is ever lacking again, since we have the tools to achieve it, and because that is the final purpose of this new humanity. I will give you a simple example, related to the much-mentioned middle class, which is really the working class, the one that truly moves society because it works every day, shift after shift, in every kind of job you can imagine. Basically, at the top are the very rich (but very, very rich), who are really entire families and their equals (other very rich families). All of them are the ones who move the economic world, BUT under their directives, and below are all the rest: politicians, the military, police, parliaments, mass media, their companies, their neighbors, you and me. For example, I tell you that this "middle class" has already begun to be replaced. Just find out, read, educate yourself on how jobs are being replaced by AI and its algorithms. In any case, in certain specific types of jobs it is and will be necessary. You will come to understand it.

3.4 The middle class is not going to disappear in the next century, the 22nd. No, the middle class disappears day by day, and this is planned to happen that way, by letting it wear down slowly. And also by replacement with intelligent machinery controlled by AI. Find out what is happening with car factories around the world. (This should only happen in the new system, for routine jobs that are unsafe and cause deaths.)

3.5 You work more. You rest less. You earn more money than a few years ago, but you feel it covers less and less; what you spend today buys less than yesterday. Have you asked yourself why?

3.6 Since money stopped being backed by gold in 1971, the financial system has changed profoundly. Today a large part of money exists as credit, debt and digital records. Meanwhile, inflation erodes purchasing power, homes are ever harder to buy, and millions of people are trapped among loans, cards, student credit and mortgages, transportation costs, on top of trying to eat and survive.

3.7 There is a concept called DEBT servitude: people who are free in their day-to-day lives, but who spend much or all of their lives working to pay obligations that seem never to end. Because they are designed to be that way. It is so because it works, and it has worked since the concept "MONEY" was created in the financial system, which enriches those who devised it. It generates immeasurable worldwide profits.

3.8 And a few geniuses maintain that this latest evolution benefits many, but the truth is that it benefits only those who concentrate economic power; others believe it is a consequence of how the modern financial system works. Whatever the explanation, the reality is that more and more people feel and know that they work only to survive. And now a new question arises with the expansion of digital money: are we moving toward a more efficient economy, or toward one where every financial movement can be, and in reality is, monitored and conditioned? Of course it will become ever more sophisticated, advanced, swift, wonderfully intelligent, but not for the benefit of

ordinary debtors, but for them, the creators of the business, the owners of the invented money. As an example, I leave here a public report, one more of the reality of many,

3.9 https://www.bbc.com/mundo/articles/cp8dn385kl0o

3.10 This is not about living in fear. Do not live in fear; begin to understand how this has always worked since the beginning of economic times, and that, unless we ourselves change it, nothing is going to change, do not even dream it. The daily profit this system leaves to those who keep it running is far too gigantic. But what happens is that you do receive something anyway, in the trickle, which is designed to reach you once a month, or once a week, or however your work contract was designed. Now think about it for a minute and you will realize it.

3.11 It is about developing judgment, real education, and understanding how the money system works, and learning to accept that this economic and life system must change, because if we do not do it now, more people every day will keep dying because of the prevailing money system. A system which, being what it is, kills people in hundreds of ways. Analyze it.

3.12 True freedom from money does not begin when you earn more money, or win the jackpot. It begins when you understand that this system has collapsed and must be replaced by another system, which I and many others propose. It is a more than radical change, a change from how we live today to another system of life where you will live longer and better, but without money; you will never need it again and no one will ever mention it again as the currency of exchange for your work or role. Because even though you live well and have a good life, other people suffer and die at the end of the day, and not through any fault of theirs, but because the current system is badly made, badly conceived, bad from its very birth a very long time ago, and at the cost of a gigantic and uncountable number of lives. And you know that what I am telling you in these lines is true; just look at and understand what is happening all over the world.

3.13 I know that to you all of this sounds like another lie, or you think that at the end of the book I am going to ask you for money, or it sounds like a madman wrote it, or like the dream of someone out of touch with reality. But of course, this reality we live in today is the one that has prevailed since this economic system was created, with money as the magic key to the system's paradise, only when you have a lot of money. But this wheel only works for the few who created it, and for the few who are a little step below, at the expense of the many of us who keep it turning. And you know very well that many could not get on the wheel, or fell off the wheel, and others have been crushed by the wheel, and those who are more or less well on top of the wheel cannot or will not do anything for those left outside the wheel. And the serious thing about all this neglect toward the rest of humanity is that very many people still believe it does not touch them, or does not concern them, because it has not yet happened to them, or to their partners or children, or family, whatever it may be. But those people are terribly mistaken, because the preventable death of those who have died seeking

money concerns us and must matter to EVERYONE, or you will deny it to me. For that reason, this whole system must change, for living well, with health and education, in personal development and the development of humanity, working at what you are passionate about for yourself and for others, all together with a full understanding of our one home planet, and with the use of high technology that already exists, in peace together, so that we humans stop suffering.

4. My Story, Short and Precise

4.1 My short story is the following. In my life I have received, over my 66 years, many salaries in money. I began working at 18, and today I am retired under the pension system that exists here in Chile. But in the 1960s and 70s it was very hard to get ahead, especially in education. I and very many others had to start working very young, and had to forget about studying, and so I could not have a good education, and by the time I perhaps could have paid for an education with my own money, I was already married and had had my children. Before me, my mother began working when she was 12 years old, cleaning hallways at the Traumatology Hospital in Santiago, Chile. She could not pay for a better education for me. My father also had to work as a small child at a lumber yard near his birthplace in the province of Mendoza, very agrarian in the 1940s, and as an adult he often did not even have work. Anyway, now, when I remember the life we had with my parents and my brothers and sisters, I know beyond doubt that the problem of all our lives was the actions, decisions and also the forced transactions we had to carry out with salaries, with MONEY. Very briefly, this is my story, but it is the story of millions of other people, men and women. And for all of them who are no longer with us on this plane, and for all the rest of us who are still struggling day to day, across the length and breadth of this beautiful planet of ours, for all human beings, I write this book, which has no profit motive, and I write it with the following idea: we, humanity, must create a new society with countless new ways of living and helping each other, with the use of high technology together with the growing AI, and with a total radical change in how we first study and then work for other human beings, in a new way of being together and, mainly, without ever again using money as a tool of transaction or exchange or barter, or as payment, which is how we know it to this day.

4.2 From here on, I will only try to explain where this problem comes from, how much serious harm it has caused, and how we know today, in hundreds of ways, that using and pursuing money, having more and more of it, has harmed and murdered us, and in the end has proven by itself to be the most harmful and self-destructive idea toward ourselves.

4.3 And I cannot fail to mention that many humans in that criminal pursuit of money, even knowing the terrible harm they cause, continue their conduct without caring about others, even while seeing the result. Well, these lines are a criticism of them, and a warning that they must change.

4.4 First, allow me at this point to explain something to you. The next lines of this book, which I write here, could perfectly well be part of an extensive political propaganda of some sector that hates another sector, political or economic or whatever it may be called. Now, I read these lines a long time ago in different publications and they are openly available on the internet. It is not my intention to start a holy war against the economic powers that wrongly control the world, much less do I represent any political side, neither red nor blue, and nothing of them comes near my position, which I do not have; I am apolitical, I do not believe in any of them, they are all the same. And all of humanity, in all countries, has an idea similar to mine, which is that the politicians are running out of time; their time is up for continuing to deceive ordinary people like me, or you. Moreover, people are moving away from politicians as much as possible, except those who can still benefit economically from them and from the good times obtained by being at their side and the economic benefits of being associated with them. You have heard it before, in whatever country you are in. What is more, I believe all of them have taken advantage of the system. For example, pushing young students to go out into the streets and expose themselves defending the ideas of the party of the day, while they sit in their armchairs enjoying a fine whisky given by some grateful voter. In short, I am not trying to raise a procession that was raised long ago, and I did not raise it. And it is not politics, not economics, not business, not any of that. It is only thinking about humanity, and how badly off we all are, even the richest of the few millionaires. And on the basis of this critical and harmful situation that humanity is going through, this idea occurred to me, of this unique possibility of a necessary and urgent change, related to how you and all of us manage to survive day after day, month after month, year after year, life after life.

4.5 This idea is a denunciation, but also a call. Humanity cannot go on dividing itself between those who have everything and those who have nothing. A new model without money, without accumulation, without exploitation, can and must arise from that urgent need for justice, dignity and equity. And you know that it can truly be achieved. Although it will hurt a few of them very much, we must make it clear to those few that the change that is coming includes them. Yes, they are an important part and cannot deny themselves a change so necessary and significant. All of us together can do it. Just as an example, suppose that a man together with his family and some technicians built a very profitable business in whatever you can think of, and what it generates is a good that is necessary for all other human beings. Then the same people who work in that business today, tomorrow, after the paradigm shift, must go on working together, from the owners to the lady who does the cleaning. And everyone, at the end of their shift or workday, can stop by the supermarket to pick up what they need for that day to take home, whatever it is. They walk into the supermarket and take only what is needed that day, and go home without paying anything, and without abuse. Because what would be the point, the logic, the gain or the pleasure of taking all the bread in the supermarket's bakery, if in that house, for that evening, only 6 loaves are needed? (It is only an example.) Besides, they would harm the other people who that evening also have to stop at the same supermarket to buy some bread for their homes. And so with every type of product that needs to be

taken home, and everywhere the same people as always working, or going to the places they wish to pick up only what they truly need, and so they keep society going, working as always, but without using money. You must not pay for what you pick up at the supermarket or at whatever shop comes to mind, since you already pay for everything you need with your work, with your role within society, with your studies at the university or institute so that in the future, one day, you will work and produce in the field you dreamed of, for others. And at the end of the day, nothing will be lacking for anyone who makes an effort from their position for all the others. And people with disabilities of any degree, grandfathers, grandmothers, the sick as well, all are treated and cared for, maintained and assisted by all the rest, regardless of anything, since we also have all modern technology, including AI, working for all of us humans, helping us determine where, how, when and what is produced and built, and also caring for our one home planet.

4.6 For the umpteenth time it is dramatically demonstrated that money is a breaking factor. From its beginning the human being has not been able to develop in harmony in community, supporting the weak fairly and training whoever must be trained, all because of having money in their exchange. There is no way around it: the human being cannot manage society if money is in the middle. Money by itself creates and causes the breakdown of morals, vision, loyalty, of everything; everything stops having value and is forgotten, because of the eagerness or the pressing need to have or accumulate money. Then everything is corrupted and rots, and therefore it becomes a disease.

4.7 And so the idea of this book, or whatever you want to call it, is that we must develop as a society by perfecting the idea that everything must go on the same in our lives, with the contribution of a great deal of technology and AI, carrying out the guidelines of a just and educating society, seeking to live with everything discussed above, each and every human being in peace, but this will be achieved only without money.

4.8 At the beginning of the most modern civilization, after the Neanderthals, in the empires of the Egyptian pharaohs, your work was for life, for the pharaoh and his family and those close to him, and your payment was precisely being able to live there. You and yours owed yourselves to the pharaoh and to his tastes and decisions. Your salary was being able to live within the empire of the pharaohs, and you had to give thanks daily that you could live for them, and give thanks for being allowed to live working for life for them. And that great good fortune you passed on to your children, who also had to live for the empire of the Egyptian pharaohs. Does this sound familiar, or similar, or identical to the life that many human beings have lived in more recent times, even today? Think it over carefully.

4.9 What would you think if I assure you that you can keep living the life you have lived until today, and more, even a very different life, safer and more complete, but with one condition: that you will never again receive a salary in MONEY. Instead, you will receive EVERYTHING you need to live well. Because living well is your right, and you work for all the others, and the others work for everyone as well. Consequently, you will always receive what you need to live: EVERYTHING, but without taking

advantage, and with awareness of how much it costs to produce and generate everything, with special focus on what it costs our one and, for now, irreplaceable home planet.

4.10 It may sound impossible, utopian, even naive. But this book is not a fantasy. It is a serious proposal, based on decades of alternative economic thinking, on the technological advances we are living through right now, and on the urgent need to change the mechanisms for paying salaries; this exchange must be removed before it is too late.

4.11 This book is a call. A call to imagine, to question, and finally, to act, making use of the resources that today, in the year 2026, and those that are already coming, are there and exist at our complete and total disposal. Honestly and intelligently, of course.

4.12 Basically, let us stop thinking about money and begin to think only about technology, which in fact already exists, except that, as it is sold, almost no one can have it, because it is very expensive to produce, since this technology follows the path described above to the point of exhaustion: whoever developed it had to pay something for the parts or for the development of the idea itself, and so on and so forth, and in the end everybody wants their slice of the cake, so in the end it is very expensive for ordinary people like you and me. Just think, for example, of the smart things created long ago, from controlling all the appliances in your home, beginning with the security around the house, through the access doors, controlled from remote security offices, to the refrigerator that sends you a message if you have run out of milk. Well, all of that is just an example, and all of it and more led by the already developed AI, and all of it working only for us humans and directed and controlled and supervised by us and with only one purpose: our life in a time when no money is paid for anything, since everything exists for your well-being and that of your family group, no matter where you work or at what, or where you studied or study today.

4.13 In addition, groups of qualified people will work to make this new way of life function, not me or you, but a determined group of people educated in each area and already qualified. Their selection will be complicated but not impossible; we will have to find the right mechanism for that selection, in fact, above the petty individual interests of each.

4.14 If we are going to carry out this gigantic and crucial change, it must be done very well, considering a great many gears and from a great many points of view. This is very important for all of humanity, and it must be carried out by trained people with the full help of the highest technology and the AI at our disposal. As an example, I leave here a public report:

4.15 https://www.dw.com/es/m%C3%A9dicos-utilizan-ia-en-tiempo-real-para-realizar-una-cirug%C3%ADa-cerebral-in%C3%A9dita/a-78579714

5. PART 1: The Beginning of the PROBLEM

6. Chapter 1: Money as the Root of Evil and of What Came After

6.1 A Brief History of Money and the Origin of the Word "Salary" (Sueldo)

6.2 Past and present history do not lie. The structural social guilt and error of economic power is the origin of the growing worldwide social protest seen lately around the world, and which has happened very many times throughout the political and social history of humanity, which 10,000 years ago began to stop being nomadic and began to settle. It happened during the Neolithic, when people stopped being only nomadic hunters and gatherers. Humans began to live in fixed settlements, cultivate the land and raise animals. By producing more food than they needed to spend in a day, a surplus was generated, and so the option arose to exchange what was produced in excess for other products that perhaps they did not have at that moment or season. Also, some people stopped planting in order to devote themselves to making pottery, stone tools, clothing or weapons, and they exchanged their creations for food with farmers from other areas, and so on and so on, and the concept of exchange kept growing more and more. And as they kept creating exchanges of every kind with other humans all around, ever farther, already following the rivers, or at sea following maritime routes, it grew so much that more diverse elements and kinds of exchange kept appearing. All of them began to be called commercial exchange, since it came from trading something, from commerce. This exchange grew exponentially, very quickly and in a generalized way, and people began to stop exchanging for things or products and instead exchanged for pieces or parts of metal, which arose when something is paid for with a knife or an axe or a tool, all made of metal. Then someone came up with minting or making small metal pieces, but made of scarce metals or metals that were very hard to obtain, such as silver, copper and gold, and that is how coins were born, of different designs and values, in those places with some degree of metallurgical development. And then more time passed, and the first banknotes appeared in China, paper receipts of deposit, which for that reason were called paper money, with some drawing or photo and already with numbers, giving them values that equaled the value that the metal coins had. As time went by, payment for certain kinds of work also appeared under the name "salary" (sueldo), which according to history was created by a few powerful people, so as to control and not lose seasonal workers who came from distant areas, so they assured them that the salary would be paid at the end of the work season, with something that was called MONEY. When you look up the word money on the Internet, the first thing that appears is its formal definition: a medium of exchange, unit of account, store of value. Technical, cold words that say little about what money really means in the lives of millions of people, in our humanity. All that academic definition does not concern me, because it was used for other eras of human history. If it was valid, it was also

overused and exploited for the financial benefit of those who defined and defended it, at the cost of the lives of many who did not even know the meaning of the words because they could not even study. They could not know that they were being deceived with financial technicalities. For centuries, yes, you read it right, CENTURIES. Generation after generation saw their work, even their lives, paid for arbitrarily through a simple mathematical system, something like I give you this in exchange for that, a type of exchange, which in the end gave a result called salary payment, in MONEY. Salary: the word "salary" (sueldo) has a very interesting historical origin, since it is related to an ancient coin made of metal.

6.3 Its etymology is as follows: Latin: solidus = "solid", "firm". The solidus was a gold coin introduced by Constantine I around the year 309 AD in the Roman Empire. It was called that because it was a coin of great purity and stable value. Over the centuries: in Vulgar Latin, solidus came to designate the coin used to pay soldiers and officials. In medieval Spanish it evolved phonetically into "sueldo". Finally, it stopped referring to the coin itself and came to mean the pay a person received for their work. The evolution can be summarized as follows: solidus (Latin) → soldo (medieval Latin) → sueldo (Spanish). Words in other languages also come from the same root: French: solde (military pay). Italian: soldo (old coin; also "money" in a colloquial sense). Portuguese: soldo (military pay). English: soldier. There is also a relation to the word "soldado" (soldier). Originally, a soldier was literally someone who received a soldo (a payment). Therefore: Soldo = pay or coin. Soldier = a person who receives that pay for providing military service. So Salary (sueldo) = remuneration or payment for work done, like a barter, an exchange of something for something, which leaves both parties to the equation satisfied, and without disagreement over what was agreed, and up to there, so far so good.

6.4 Money as the Root of Evil and of What Came After

6.5 Money did not always exist. There was a time in human history when communities functioned through direct cooperation, BARTER and reciprocity. People exchanged goods and services based on mutual trust and community need.

6.6 But as societies grew, money emerged as a practical solution to a problem of coordination and logistics: how to facilitate exchange when there is no direct coincidence of needs? Money was, at first, a means of solving this complexity, but at the beginning no one saw the great, harmful mistake that this tool would bring.

6.7 However, what began as a useful tool turned into an end in itself. Money stopped being simply a medium of exchange and became the measure of human worth, the goal of existence, the reason to live and, if necessary, to kill, in order to have or keep money.

6.8 And that is where the great and unmanageable problem began.

6.9 The Trap of Money

6.10 Money has become the greatest and most dangerous trap for ourselves, and the struggle to possess and accumulate it has created, among other things:

6.11 Wars and global conflicts that have claimed millions of lives

6.12 Systemic corruption in governments and state institutions

6.13 Indiscriminate political use, using it as a tool

6.14 Human organs are trafficked and sold, to have money

6.15 Misery and hunger when there is an abundance of resources

6.16 Social resentment and division between rich and poor

6.17 Very many people took their own lives after losing millions of money

6.18 Environmental destruction in the pursuit of profit

6.19 The power of money corrupts lives and human morals and values

6.20 Crime and violence and drug sales motivated by having money

6.21 The cost is no longer measured in coins or on stock markets. It is measured in millions of broken lives, in divided societies, in a planet on the edge of environmental collapse. Wars falsely named with a legitimate purpose of defense, when it is known that it is only for money. It is measured in the daily suffering of people who work at whatever they can their whole lives and still never manage to cover their minimum basic needs for subsistence.

6.22 Concrete Examples of the Harm

6.23 The examples of the harm caused by money are countless and painful:

6.24 Prostitution and Human Trafficking: There are adults who trade for money, having sexual relations with minors. They manage it because there are minors who, for various reasons, need money. If that need did not exist, they would have no reason to submit to that abuse. And note that behind them there are adults who profit with money. It is an endless road, which not even states can stop.

6.25 Crime Due to Addictions: There are countless cases of people sick with addiction who, in order to maintain their illness, needed money. Having no job to obtain it, they killed someone who refused to give it to them or stole objects to sell. The richest societies are suffering these addictions day after day. If profit, the money, is removed from this equation, drugs come to an end.

6.26 In relation to people who are sick with some addiction, in the new humanity without money, all of them without exception will be treated and healed by the state. It is the responsibility of all of us to rescue the addicts whom nobody helped at the beginning of their addiction, without real support networks, and you know very well that too many people have already died who were made addicts so that they would pay.

6.27 Exploitation of Natural Resources: My country, Chile, like all countries, has natural resources that are extracted, processed, produced and sold to other countries for money. But what happens to the planet at the place of extraction and to the people involved in the whole production chain matters to almost no one. Profit is placed above the life of anyone, even of minors exploited in illegal mining in some countries.

6.28 Health as a Commodity: If I am sick and have no money to pay for the medical care I need, I can simply die, I am going to die. Someone may care about my life, but they cannot do anything either if they do not have that MONEY.

6.29 Limited Education: Millions of children and young people with talent and potential will never develop their abilities because their families have no money to pay for quality education. The genius who could cure cancer, or another serious disease, is today cleaning streets, with no possibility of studying, because they were born in the wrong family, in the wrong country, or on the wrong continent.

6.30 Money Distorts Everything

6.31 The fundamental problem of money is not only the inequality it generates, but how it distorts all human activity:

6.32 It Distorts Work: People do not work at what they are passionate about or at what society needs most, but at what pays best. A talented teacher ends up selling financial products because they need to feed their family.

6.33 It Distorts Production: Companies do not produce what humanity needs, but what generates the most profit. Products are made designed to fail (planned obsolescence) to guarantee that you keep buying.

6.34 It Distorts Relationships: Friendships, love, family — all human relationships — are tinged by economic considerations. How many couples stay together not out of love but out of economic dependence? How many friendships are based on financial convenience? Marriages and that future family, only for the convenience of the money to be collected. Remember that in some places or countries daughters are sold in marriages arranged for money, and some powerful people buy minors, and the worst of it is that there are parents who sell them.

6.35 It Distorts Values: Success is measured in money, not in contribution to society. A financial speculator who produces nothing of value for the rest of humans is considered "successful", while a nurse who saves lives is considered "working class".

6.36 It Distorts Innovation: Scientific research focuses on what is patentable and sellable, not on what benefits humanity most. There is very little research into tropical diseases that kill millions of people, because those who suffer from them cannot pay for the treatments. And it cannot go unmentioned at this point how profitable the pharmaceutical industries are for their owners, which are for the most part created and operating in highly developed countries. Strange, no? To put it lightly, without bad words of course.

6.37 The System Is Broken

6.38 The current monetary system does not only create problems, it is fundamentally broken:

6.39 We live on a planet with enough resources to feed, clothe, educate and provide health care to all human beings. The technology exists. The productive capacity exists. What does NOT exist is a distribution system that works for everyone. And the other thing that still does NOT exist is the will and decision to change this money system, forever, for the new paradigm of a new life, based on technology and the use of AI, which has the ability to enhance technology; by itself it does not, we must direct it, for our own benefit.

6.40 Money is the bottleneck. Not because resources are lacking, but because access to those resources is mediated by a system that rewards accumulation and punishes need. Yes, you are punished if you need something: you must hand over part of your salary in exchange, and if not, you have nothing. It is a charge against your money, a charge against your own life.

6.41 We produce food for 10 billion people, but we are about 8.2 billion and there is still hunger. It is not a production problem. It is a distribution problem based on money, which is expected to be received in exchange. Profit or gain over human life, abusing you on the basis of your needs, and if you have no money, forget it.

6.42 We have empty houses while there are homeless people. We have stored medicines that could save lives, stored because it is not economically profitable to distribute them. We have knowledge that could transform lives, but it is blocked behind paywalls. Profit or gain over life: again and again, the examples are millions, just as there are millions of human lives.

6.43 The Fundamental Contradiction

6.44 The greatest and proven contradiction of our time is this:

6.45 We have the technological capacity to create abundance, but the monetary system requires scarcity in order to function and sustain itself. The mathematical scholars graduated from the most prestigious universities in the world know about this mathematical theorem, which must be maintained at all costs, at any price, and it does not matter if you die in the meantime during the monetary transaction.

6.46 It is a mechanism as old as the very creation of money, which only pursues one thing: that money in itself creates more of itself. Money creates itself, like, taking it from you, since you are used to multiply that money. That is how simple the equation is.

6.47 Prices only make sense when something is scarce. If something is abundant, its price tends toward zero. Therefore, the system has a perverse incentive to maintain artificial scarcity, even when existence or abundance is real and possible.

6.48 This explains why, for example, pharmaceutical companies patent medicines and sell them at exorbitant prices instead of distributing them normally or for free. You see, and it goes on and on,

6.49 Energy companies hold back the development of free solar energy

6.50 Food is destroyed to create scarcity and keep prices high

6.51 The large worldwide supermarket chains throw away tons of food every day

6.52 Knowledge is kept behind university or institute paywalls

6.53 Please read carefully: the monetary system we know and the abundance of goods and services are incompatible. And we have reached a point in human history where we must stop and halt the current system and choose a necessary radical change, but not for another money or another salary or another economic payment. No, never again that thing called money. It will no longer be needed, ever again.

6.54 Do we want a system that works toward the good and well-being of all humans and of the planet, based on the values that have sustained humanity, helping one another, protecting the weakest, studying and progressing technologically, protecting the planet and its resources intelligently, eliminating poverty in every area it touches, healing whoever falls ill, regardless of any of what is asked for first today at medical centers, in the places where one can be found, and so on and so on, one could keep naming necessary changes for all of humanity. Or do we want to keep money?

6.55 We cannot have both. Because both cannot exist on the same plane of human life, as we know it today.

7. Chapter 2: The Concentration of Power and the Birth of Resistance

7.1 or of Discontent with the Status Quo. The concentration of money or wealth, as the driving cause of inequality, in the past and today too, has been repeated very many times, and more or less always with the same results in the end, no matter which continent one lives on. Throughout modern history, a constant has repeated itself with devastating consequences for social peace and human balance: the excessive accumulation of wealth by an economic elite that, through its resources, has controlled not only productive capital but also the political, legal, media and educational systems. This concentration of power has meant not only a material imbalance but also a moral imbalance. While a small minority has accumulated unthinkable fortunes, millions of human beings have been dragged into precarious conditions, without real opportunities for development, some of them almost forced to commit crimes in order to survive, which is not right, but just for a moment put yourself in the place of that woman or man. And the most serious thing is that this imbalance has not been accidental; it has been the direct result of conscious decisions made by corporations, businesspeople and economic-political groups, who

have prioritized their greed and their ultimate goal of being the only millionaires, over the common good. The economic model is exclusionary and abusive. The large corporations and the owners of capital have promoted, protected and perfected an economic model based on unfair competition, labor exploitation, financial speculation and unrestrained extractivism. This system is held up by pillars that have suffocated the lives of millions: Miserable wages against multimillion-dollar profits. Labor deregulation, with workers without minimum guaranteed rights. Externalization of social and environmental costs, where companies pollute, degrade and deplete resources while shifting the consequences onto society. Privatization of basic services, turning health, education, housing and water into businesses. Structural indebtedness, trapping families and entire countries in endless debt cycles. All of this managed by banks and gigantic groups of banks. Or do you still believe that banks, wherever they are, do not communicate with each other, do not look after each other, do not come to agreements, that their highest levels do not meet in coordination meetings? This model generates a constant sense of hopelessness and suffocation in those who fail to "fit in" with the logic of the market. While the richest accumulate even more, the others, who are millions, become impoverished, fall ill, die or live with an anguish that never ends.

7.2 Political power as the main tool, extension and lever of economic power:

7.3 The economic elite has not only dominated the business world: it has co-opted the powers of the State to protect its interests. This has happened through:

7.4 Financing of political campaigns, ensuring that elected legislators work for them.

7.5 Drafting of laws and tax reforms that benefit big business.

7.6 Control of the media, shaping public opinion to blame the poor for their poverty.

7.7 Repression of social discontent, through the use of the armed forces and police, which are subordinate to governments that protect the interests of capital.

7.8 This marriage between politics and economic power has turned democracy into an illusion. The will of the people is subordinated to money. And when citizens discover it and protest, they are treated as enemies, as "violent", as a threat, when in reality they are only demanding what is theirs by justice.

7.9 The birth of social movements and revolutions: the natural response to centuries of abuse, just read the history of humanity

7.10 It is no coincidence that, at different moments in history, entire peoples have risen up against their economic oppressors. These uprisings were neither spontaneous nor capricious: they were inevitable responses to systematic injustice.

7.11 Overthrow of the Tsars in Russia

7.12 The Romanovs, for centuries, generation after generation, lived in opulence while the Russian people died of hunger. The fall of the tsar in February 1917 and the

Bolshevik coup of October of that year were the direct consequence of that contempt for the people. The tsars sowed their own end with their indifference.

7.13 The Storming of the Bastille and the French Revolution

7.14 The French nobility and aristocracy lived in obscene luxury while the people did not even have bread. The Revolution of 1789 and the executions that followed were the consequence of a cruel and immoral class system.

7.15 Protests in Hong Kong, Paris and Chile

7.16 More recently, we have seen massive protests in different parts of the world:

7.17 In Hong Kong, the youth rose up against the advance of a power that crushes freedoms.

7.18 In Paris, the "yellow vests" movement denounced structural inequality and the disconnect between rulers and the people.

7.19 In Chile, on October 18, 2019, an entire generation awakened to a system that privatized even water, condemned millions to poverty and handed the country over to a few business families and foreign consortia from Europe and Asia.

7.20 In all these cases, the common denominator is the injustice caused by the abuse of economic power, secured through the use and abuse of the powers of the state and of police and military power if necessary to keep people in check, and which ends up generating its own opposition.

7.21 The Business Class as the Architect of Its Own Discredit and Isolation

7.22 Popular resistance, the organization of communist, socialist, anarchist or leftist parties, did not arise by chance or through outside indoctrination: it arose as a historical and legitimate response to a structure that excludes, oppresses and destroys. Which, to be honest, is also not exempt from enormous and criminal errors against its own people; there are many examples in the history of the last 200 years, especially in some countries in Asia and some in Latin America.

7.23 Business owners and elites bear direct responsibility for the birth of these movements, since they:

7.24 Denied dialogue with workers.

7.25 Demonized the redistribution of wealth.

7.26 Criminalized legitimate protest.

7.27 Protected themselves with laws created by themselves.

7.28 Reduced human dignity to a number on a spreadsheet.

7.29 Those who today accuse social movements of being "violent" are the same ones who for decades exercised systematic, silent and structural economic violence.

7.30 Conclusion: There Is No Peace Without Justice, and It Can Be Achieved, but Without Ever Using Money Again

7.31 History teaches us that peace is not built with repression, but with justice. Business owners and the sectors of economic power must assume their guilt and share in the origin of global social unrest. It is not enough to give alms or corporate social responsibility campaigns: what is needed is structural reparation, fair redistribution, and a new model where human life and its presence on the planet is always worth more than money.

7.32 In a world without money, such as the one this book proposes, there would be no reason for greed, accumulation or exclusion. Therefore, the deep causes of social resentment, rebellions, political polarization and hopelessness would also disappear, along with the terribly harmful businesses created to generate money but which have caused only deaths, such as pharmaceuticals, weapons and drugs, just to mention the most common.

7.33 Excessive accumulation and concentration of power

7.34 The economic elites, made up of business owners, multinational corporations, major bankers and families with age-old fortunes, have been key actors in sustaining and deepening an economic system that, beyond fostering growth, has marginalized millions. Their insatiable eagerness to accumulate more wealth has created a suffocating reality for those who fail to adapt to the rhythms and demands of this extractivist and unequal model. This power group is something like 2.8% of the total population of the planet, who without money move nothing, weigh nothing.

7.35 This sector, endowed with an excessive economic power, not only directs the markets, but also influences political decisions, drafts laws that favor them, controls the media and finances leaders who respond to their interests. This marriage between money and political power has shaped a legal architecture that protects their privileges and punishes dissent or any attempt at redistribution or change.

7.36 The economy as a wall for the majority

7.37 While the elites live in an artificial abundance sustained by speculation, workers must survive in conditions of precariousness. Unjust wage structures, widespread indebtedness, and limited access to basic services such as health, education and housing have generated a time bomb that explodes when injustices become intolerable.

7.38 It is not simply inequality: it is an economy that punishes those who sustain it. Workers, the engine of all production, are treated as efficiency figures, replaceable and exploitable, while the benefits are concentrated in the corporate upper echelons. It is this structural violence that has lit the fuse of multiple social uprisings throughout history.

7.39 The birth of resistance and the response of the peoples

7.40 Many of the movements that today are labeled "radical" or "dangerous" were born as logical responses to constant exploitation. The French Revolution was a reaction to the luxury and extravagance of the nobility in the face of the people's hunger. The overthrow of the Russian tsars gave way to the Bolshevik revolution of October 1917, a desperate attempt to end the aristocratic regime and give power to the proletariat. In each case, it was the abuse by the elites that sowed the seed of change, which in some cases was not very good either; just look today at the life in enslaved countries such as Cuba, Nicaragua, Venezuela, North Korea, etc. etc. etc.

7.41 More recently, the protests in Hong Kong, the "yellow vest" revolts in Paris, and the social outbreak of October 18, 2019 in Chile have in common the same root: the widespread feeling of abuse by a system that protects the powerful and crushes the weakest. In Chile, the increase in transport fares was only the trigger of a discontent accumulated over decades of privatizations, abuses by the AFP (pension fund managers), inequality in health and education, the sale of the country's natural wealth, and people not seeing a single peso of those gigantic profits, with salaries that are not enough to live with dignity.

7.42 Who generates the conflict?

7.43 It is not the peoples who generate chaos. It is the elites who, by refusing to change their selfish and predatory model, force the marginalized sectors to raise their voices, to mobilize, to demand what in justice belongs to them. The repressive forces, which are also at the service of those who have enough money to direct them, act as a shield to preserve the order they created, but with a direct benefit only for them. And if you reach some of that distribution of benefits, it is because you somehow managed to study and have contacts and luck, and you sacrifice yourself and do whatever is necessary to stay at that point. Well, all of that is unjust, even for you, and for your family too.

7.44 History shows that revolutions do not arise out of nothing: they are the result of collective desperation. Historically, the elites have created their own enemies by not allowing a more equitable economy, by not sharing, not necessarily money, by concentrating everything and by denying the right to a dignified life to millions of other human beings.

7.45 Humanity is already tired of the abuses of political and economic groups, whatever they are, whoever they are, or whatever they call themselves, in whatever country, and whatever flag they raise, with whatever colors and drawings and photos they come up with, because at the end of the day all of them, all of them, are the same.

7.46 The rise of communist, socialist and other progressive or revolutionary parties and movements has been a direct reaction to dispossession. The same rich who today accuse of "populism" or "subversion" those who confront them should look in the

mirror of history and recognize their role as victimizers. As long as there is an elite that lives in opulence at the cost of the hunger and desperation of millions, there will be voices that rise up.

8. Chapter 3: The Human Cost

8.1 The Human Cost

8.2 Stories That Hurt

8.3 Behind every statistic there is a human story. Behind every number there is a face, a name, a family that suffers. The monetary system is not only inefficient or unjust in the abstract; it destroys real lives, every day.

8.4 The Mother Who Works Three Jobs: I knew a woman who worked from 6 AM to 10 PM, alternating among three different jobs. Her children saw her only on Sundays. One day she told me: Friend, 'I am not living. I am only surviving.' She worked hard, was honest and responsible. But the system had trapped her on a kind of hamster wheel she could not get off.

8.5 The Talented Young Man Who Never Had a Chance: A boy brilliant at mathematics, able to solve complex problems in his head, but who had to leave school at 14 to help financially at home. Now he works in construction. His talent is wasted because he was born in the wrong home.

8.6 The Sick Man Without Access to Treatment: A man with a treatable illness, but without the resources to pay for treatment. He watched his condition worsen knowing that the solution existed, but was out of his reach. He died not for lack of medicine, but for lack of money.

8.7 The Abandoned Elder: A person who worked all their life, paid taxes, contributed to society, but who in old age does not have enough to live with dignity. They must choose between eating or buying their medicines. This is the reward the system gives after a lifetime of work.

8.8 The Psychological Cost

8.9 The harm of money is not only material. The psychological cost is devastating:

8.10 Constant Anxiety: Millions of people live in permanent anxiety over money. Will it be enough for the end of the month? What happens if I get sick? What if I lose my job? This anxiety is toxic and deteriorates mental health, and after passing this point you become seriously ill and die.

8.11 Damaged Relationships: Fights over money are one of the main causes of divorce. Families destroyed not for lack of love, but because of economic pressure. Parents who do not see their children grow up because they must work constantly. Children

who grow up feeling that their parents do not love them, when the reality is that they are desperate to provide.

8.12 Loss of Purpose: People who work in jobs they hate, doing things they do not care about, only for money. Life becomes a succession of gray days, waiting for the weekend, counting the years until retirement. This is not living. It is barely surviving.

8.13 Low Self-Esteem: The system constantly tells you that your worth as a person is related to how much you earn. If you earn little, you are worth little. This generates a negative self-image that is hard to overcome. In addition, it means living day after day in the same place, the same neighborhood, the same country, with no more options, and that makes you sick, and if it makes you sick it kills you after a certain time, proven and signed off by many studies that have been carried out, above all in developing countries.

8.14 The Social Cost

8.15 At the social level, money has created deep and destructive divisions:

8.16 Class Divisions: Society has divided into economic castes that grow and relate only among themselves. The rich live in bubbles, without understanding the reality of those who struggle to survive. The poor look at the rich with resentment and distrust. The middle class is trapped, constantly worried about falling and of course dreams of rising.

8.17 Erosion of Solidarity: In a system where each person must look out for themselves, solidarity becomes a luxury that few can afford. 'It's not my problem' becomes the survival mantra. Empathy withers.

8.18 Criminalization of Poverty: The poor not only suffer material deprivation, they are also criminalized. If you steal because you are hungry, you go to jail. If you speculate with food and thousands die of hunger, you are a 'successful businessman'.

8.19 Loss of Community: Traditional communities where people helped one another have been replaced by urban atomization. We do not even know our neighbors. Every family is an island, struggling alone.

8.20 The Environmental Cost

8.21 The planet is paying the highest price of all for our monetary system:

8.22 Limitless Exploitation: The pursuit of profit has led to the excessive exploitation of natural resources. Felled forests, polluted oceans, extinct species — everything sacrificed on the altar of money.

8.23 Climate Change: The climate crisis is, fundamentally, a crisis of the monetary system. Companies keep emitting CO2 because it is more profitable than changing. Governments do not act because changing the economic system is 'too costly'. Or because the politicians were bought. Meanwhile, the planet heats up.

8.24 Waste and Pollution: We produce massive waste because it is more profitable to make cheap, disposable products than durable ones. Planned obsolescence fills landfills with technology that could work for decades.

8.25 Loss of Biodiversity: Entire ecosystems are disappearing because land is more 'valuable' as a plantation or mine than as natural habitat. Monetary value is placed above ecological value.

8.26 The Cost of Wasted Talent

8.27 One of the least visible but most devastating costs is wasted human talent:

8.28 How Many Einsteins Work in the Fields: How many potential geniuses are trapped in manual jobs because they were born in the wrong place? How many Mozarts never had access to a musical instrument? How many Marie Curies are cleaning houses because they could not pay for university?

8.29 Blocked Research: Brilliant scientists must spend more time looking for funding than doing research. Promising projects die for lack of funds, while billions are squandered on advertising stupid and unnecessary products, but which still generate gain or profit.

8.30 Limited Art and Culture: Talented artists must work in jobs they do not like in order to survive, leaving their art for weekends. Humanity loses their contributions because 'art does not pay the bills'.

8.31 Stalled Innovation: The best minds of generations are working on how to make people click on ads, instead of solving humanity's great problems. This is a criminal waste of human potential.

8.32 The Generational Cost

8.33 The consequences of the monetary system are passed down from generation to generation:

8.34 Children who grow up in poverty have worse educational results, not because they are less intelligent, but because they have fewer resources. This condemns them to worse-paid jobs. Their children inherit this disadvantage. And the cycle continues. For the benefit of someone else's gain or profit, the few over the many

8.35 Rich families pass down not only money, but connections, education, opportunities. This creates an inherited aristocracy that completely contradicts any notion of meritocracy.

8.36 Each generation goes deeper into debt than the last. Today's young people face massive student debt, unaffordable housing prices, and a precarious labor market. Many have already given up the idea that their life will be better than their parents', they cannot see a way out different from their parents', what they see is even worse.

8.37 The Final Tally

8.38 If you added up the entire cost of the monetary system, what would the total be?

8.39 Billions of lives lived in anxiety and deprivation. Millions of preventable deaths for lack of access to medicine, food, clean water. Wasted talents that could have transformed the world. Destroyed relationships. Fragmented communities. A planet on the edge of collapse. Much poverty and death unfolding all around us, all over the world.

8.40 And all this... for what? To maintain a system that benefits a few while condemning billions to the daily struggle to survive?

8.41 The cost is too high.

8.42 It is no longer sustainable.

8.43 It is no longer acceptable.

8.44 It is time for a fundamental change.

8.45 This change is mortally necessary. At first it will seem impossible to carry out. If you imagine it for a few seconds, I am already achieving a change. And it is a change necessary for you and yours, for all humans.

8.46 And I pause for just a second to write this, which I believe is very necessary.

8.47 I do not write this book or manual or review, truthfully I do not know what to call these writings, in order to make money, NO, that is precisely what I am struggling against in my mind as I write this. And I do it first of all for my family, my wife and my children, and then for every human being, for everyone, from those who are in prison, or in a hospital or in a psychiatric ward, or working underground thinking about when the hill might fall onto their life, for each and every one of us humans, including also the people who have a great deal of money and riches, they are human too and are part of this problem. Moreover, they and all of us are the answer to this idea, and the change, which is already very necessary, can be made. That is why I write these lines, only so that the change happens, which will change the life of all Humanity and, for now, of our one home planet. So please, let us help one another; all of us can contribute ideas and initiatives toward this change. And as an example, just think how the human being, or you yourself, reacts when something tragic happens to those close to you or to the neighbors, or to a friendly country, whatever happens, from small tragedies to great fatalities with high costs in human lives. There we all react with the spirit and the will to help others, surely even without knowing them, only understanding the harm they have received. Well, this change of society, to stop using money and to live in a daily work and life for others, and living with everything that may be needed for a calm and balanced life, in abundance and with the support of the most developed technology available, for all of us together, for us, humanity, differentiating roles and contributions and conduct and good living. It is the same: it is doing it for others without knowing them, and receiving what you and yours truly need in everyday life, normally. Only that must be achieved. It is the same.

9. Chapter 4: Why Previous Alternatives Failed

9.1 This Is Not the First Time This Change Has Been Attempted

9.2 The idea of creating a fairer and more equitable society is not new. Throughout history, countless thinkers, revolutionaries and movements have tried to transform the economic system. Some tried through gradual reforms. Others through violent revolutions. All of them failed, or at least did not achieve the fundamental change they sought.

9.3 Why? What went wrong? And most important: what can we learn from these failures so as not to repeat them?

9.4 The Socialist and Communist Experiment

9.5 The 20th century saw the greatest experiment in alternative economies: Soviet, Chinese, Cuban and other socialism and communism.

9.6 The Promise: A society where the means of production belong to everyone, where there is no exploitation, where each contributes according to their ability and receives according to their need.

9.7 The Reality: Brutal dictatorships, inefficient economies, mass repression with many deaths along the way, and eventually, collapse.

9.8 Why did they fail?

9.9 Extreme Centralization: The State controlled everything. Economic decisions were made by a central bureaucracy that could not process the information needed for a complex economy.

9.10 Lack of Technology: In the 20th century the technology did not exist to coordinate a complex economy without market prices. Computers were primitive, there was no internet, there was no AI.

9.11 Corruption of Power: Concentrating all power in the State led to massive corruption. The party leaders became a new privileged class.

9.12 Repression of Freedom: To maintain the system, individual freedom had to be repressed. Whoever criticized or tried to innovate outside the official lines was punished.

9.13 Global Isolation: These countries tried to create alternative economies while surrounded by hostile capitalist economies. This led to militarization and scarcity.

9.14 Lessons Learned: Twentieth-century socialism teaches us that:

9.15 Extreme centralization does not work

9.16 Absolute power corrupts absolutely

9.17 Individual freedom is essential

9.18 Economic coordination requires better technology

9.19 Change must be global, not isolated

9.20 The Social Democratic Welfare State

9.21 Another attempt was the so-called European social democracies: Sweden, Norway, Denmark, Germany.

9.22 The Promise: Keep capitalism, but with strong social safety nets: universal health care, free education, good wages, social protection.

9.23 The Reality: It worked better than socialism and communism, but:

9.24 It still requires money as a mediator

9.25 It still has inequality, although less

9.26 It depends on the exploitation of other countries (modern colonialism)

9.27 It is under constant pressure from neoliberalism

9.28 It does not solve environmental problems

9.29 The social democracies improved the lives of many, but did not fundamentally transform the system. They remain capitalist economies with a layer of social protection. And that layer is eroding. As it is running out, or more money cannot be produced, and guess why.

9.30 Cooperatives and Local Alternative Economies

9.31 There have been smaller experiments: worker cooperatives, local currencies, gift economies, intentional communities.

9.32 Some have had moderate success: Mondragón in Spain, the cooperative economy of Emilia-Romagna in Italy.

9.33 But they all face the same problem: they exist as islands in a capitalist ocean. They cannot completely escape the monetary system because they must interact with it in order to survive.

9.34 The Economic Calculation Problem

9.35 The most serious criticism of any economy without money was formulated by the economist Ludwig von Mises in 1920: the Economic Calculation Problem.

9.36 His argument: Without market prices, it is impossible to rationally calculate how to allocate resources. Prices communicate information about scarcity and demand. Without them, there is economic chaos.

9.37 This criticism was devastating for 20th-century socialism. And it was largely correct... for its time.

9.38 But Mises wrote this in 1920. He could not imagine the existence of:

9.39 The Internet and IoT (Internet of Things)

9.40 Big Data and real-time analysis

9.41 Artificial Intelligence and Machine Learning

9.42 Blockchain for transparency and traceability of everything

9.43 Technology has completely changed the equation. What was impossible in 1920, or even in 1990, is possible today.

9.44 Why Today Is Different

9.45 All previous attempts at alternative economies failed or were limited. But today we have advantages that did not exist before:

9.46 Coordination Technology

9.47 Today we have the technology to coordinate a complex global economy without money:

9.48 IoT: Sensors across the whole production chain that monitor in real time

9.49 AI: Algorithms that can optimize production and distribution

9.50 Big Data: Analysis of consumption patterns and needs

9.51 Blockchain: Total transparency in the flow of resources

9.52 This solves the 'economic calculation problem'. We do not need prices when we have direct data on needs and capacities.

9.53 Mass Automation

9.54 Automation is eliminating the need for human labor in many areas:

9.55 Agriculture: Autonomous tractors, drones, automated greenhouses

9.56 Manufacturing: Robots that can make almost anything

9.57 Logistics: Autonomous vehicles, delivery drones, robotized warehouses

9.58 Services: AI can perform many administrative and analytical tasks, even creative ones

9.59 This solves the problem of 'who will do the work nobody wants to do'. The answer: machines, directed and kept in proper working order, with their mechanical maintenance, by AI and controlled by the qualified technicians assigned to that work, who will have their minds and souls oriented toward others, for the general good of all.

9.60 Material Abundance

9.61 We have reached an unprecedented level of productive capacity: We can produce food for 10 billion people

9.62 Solar energy can provide 100x our energy demand

9.63 We have the technology to build quality housing quickly

9.64 Human knowledge is digitized, it can be copied infinitely at zero cost, and therefore it is distributed to everyone for free, quickly. The problem is not the capacity to produce. It is distribution based on money.

9.65 Global Awareness

9.66 The Internet has created a global awareness:

9.67 Millions of people are aware of the injustice of the system

9.68 Social movements can coordinate globally

9.69 Information cannot be suppressed as in the past

9.70 Ideas spread instantly around the world

9.71 We are no longer isolated in national bubbles. We can think and act globally.

9.72 Crisis as a Catalyst

9.73 Finally, we are facing a crisis that makes change not only possible, but necessary:

9.74 Climate Crisis: Capitalism is destroying the planet

9.75 Inequality Crisis: It has never been so extreme

9.76 Automation Crisis: Millions will lose jobs in the next decade

9.77 Crisis of Meaning: People are exhausted by the current system

9.78 These crises are creating the opening for radical change. As Jacque Fresco said: 'People will not consider a different social arrangement until the current one no longer serves them. /

9.79 The Necessary Synthesis

9.80 What this book proposes is not:

9.81 Soviet socialism (extreme centralization, repression)

9.82 Blind capitalism, which does not care about whoever falls or fails

9.83 Social democracy (capitalism with short safety nets)

9.84 Isolated cooperativism (islands in a capitalist ocean)

9.85 Much less eliminating those who have the money (they can keep it)

9.86 It is NOT eliminating anyone; on the contrary, everyone is needed, together, helping each other

9.87 It is something new: A resource-based economy, coordinated by technology, with mass automation, individual freedom, and gradual transition.

9.88 Let us learn from past failures:

9.89 Not extreme centralization, but distributed coordination

9.90 Not repression, but freedom and participation

9.91 Not isolation, but coordinated global change

9.92 Not violent imposition, but gradual transition

9.93 And let us take advantage of the strengths of the present:

9.94 Coordination technology

9.95 Automation

9.96 Productive abundance

9.97 Global awareness

9.98 Artificial Intelligence

9.99 For the first time in human history, we have all the necessary ingredients. It is not a distant utopia. It is an immediate possibility. It is real.

9.100 The question is not whether it is possible. The question is whether we have the will to do it.

9.101 And how we set up the working groups to go step by step designing it, the blueprint of the original project, to begin from some common point, and I repeat, this change in the system is not for any personal benefit whatsoever. All this necessary development, from its origin, is without profit motive, absolutely, because this is precisely what I consider more than necessary to eliminate. The payment in money for whatever you do must be eliminated forever from our lives, since everything must be given to everyone else for free, and so everything comes back to me for free too. How can it be so hard to understand, I say.

10. PART 2: THE SOLUTION EXISTS, IT IS REAL

11. Chapter 5: Vision of a New Humanity Without Money

11.1 What Would This World Be Like?

11.2 Imagine waking up tomorrow in a world without money. Not because of an economic collapse, but because humanity has evolved beyond the need for money. A world that no longer uses money as payment in exchange for something, or for anything.

11.3 What would your day be like?

11.4 You wake up in your home. You do not pay rent or a mortgage, because housing is a guaranteed right. The house was built by robots and humans working together, using

the best materials available, earthquake-resistant, designed to last generations, because it is no longer part of a business designed to profit, or to be disposable so that you have to pay again.

11.5 You have breakfast with fresh, nutritious food. You do not worry about the cost because food is free. It was grown by automated agricultural systems, distributed efficiently, without waste, and developed to nourish, not to make you sick as happens today.

11.6 You go out to work — yes, you still work, but it is different. You work at something you are passionate about, that makes sense to you, that contributes to society. Not because you need a salary, but because you want to and need to contribute, learn, create. You work with a greater purpose.

11.7 If you are sick, you simply go to the hospital. You do not worry about medical bills. Charges for anything, or for nothing, no longer exist. The care is excellent because the doctors chose medicine out of vocation, not for money. The best treatments are available to everyone because there are no patent restrictions, and AI is already saving lives for free.

11.8 Your children go to schools where learning is personalized, where each child develops their unique potential. The teachers are the best because they chose to teach out of passion, not for a salary. The most advanced educational technology is available to everyone. Even in Africa and South America, and every poor country without resources such as oil and rare earths, all included.

11.9 In your free time, you can develop your hobbies, spend time with family and friends, travel, learn new skills. Life does not revolve around earning money, since that requirement no longer exists, ever. This and everything works only around living fully in tranquility.

11.10 The Fundamental Principles

11.11 This new world is based on fundamental principles:

11.12 Work as Contribution of everyone for everyone with everyone

11.13 Not as a sickly daily survival under stress

11.14 Never again is any work traded for money

11.15 In today's world, you work to survive.

11.16 In the new world, you work to contribute.

11.17 The difference is radical.

11.18 Current Work Using Money:

11.19 Motivated by economic need and the struggle to accumulate it

11.20 You do what pays, not what you are passionate about

11.21 Stressful, exhausting, alienating, it makes you sick

11.22 It defines your social status and your reach

11.23 It consumes most of your life and everyone's, with a few exceptions

11.24 Work in the New World: The new humanity without money

11.25 Motivated by passion and humanitarian purpose

11.26 You are educated in what you love and serve, at no cost

11.27 You do what you love and what benefits others, for free

11.28 Satisfying, energizing, humanitarian meaning

11.29 A form of self-expression and self-validation

11.30 Balanced with free time and family as the axis of your life

11.31 Guaranteed Universal Rights. These rights are guaranteed for all, without exception:

11.32 Health: Complete medical care, preventive and curative, for life

11.33 Education: From preschool through postgraduate, of the highest quality

11.34 Housing: A dignified, well-built home, in planned communities

11.35 Food: Nutritious, varied food, enough for everyone

11.36 Transportation: Efficient and free public transport systems

11.37 Energy: Unlimited access to clean and renewable energy

11.38 Connectivity: High-speed Internet for everyone

11.39 Suitable places for your religion and your faith

11.40 Culture and Recreation: Access to art, sports, entertainment.

11.41 Betting is eliminated, gambling addiction is healed, there is no longer any need to go collect anything

11.42 Technology at the Service of Humanity. Technology — especially Artificial Intelligence and automation — is not a threat. It is the key that makes this new world possible.

11.43 AI takes charge of:

11.44 Coordinating global production based on real and measurable needs

11.45 Optimizing the distribution of resources, and the intelligent use of land

11.46 Monitoring the health of the planet in real time

11.47 Performing repetitive, dangerous or deadly work

11.48 Assisting scientific and medical research

11.49 Facilitating personalized education

11.50 So that humans can devote themselves to:

11.51 Creative, artistic and cultural work

11.52 Caring for people (health, education, counseling, psychological or psychiatric support)

11.53 Research and development of cures for diseases

11.54 Supervision and direction of autonomous systems

11.55 Human connection and community building

11.56 An Economy Based on the Planet's Resources, Not on Money

11.57 The economy works like this: Instead of: 'I have money → I buy things → I satisfy some needs'

11.58 New Humanity: 'I have needs → The system provides → I contribute with my work'

11.59 It is not barter. There is no direct exchange with money; this is no longer needed or does not exist.

11.60 It is real personal and collective contribution every day and assured access to everything that is needed.

11.61 The system monitors:

11.62 What natural resources we have

11.63 What people need

11.64 How to produce efficiently

11.65 How to distribute equitably

11.66 Analyzed environmental impact of every action

11.67 Expanded Individual Freedom. Contrary to what many might think, this system expands individual freedom, it does not reduce it. It fosters your freedom, on the condition of your contribution to others, always

11.68 Current Freedom (with money and only with money):

11.69 'You are free to choose your job' - if you have education and opportunities

11.70 'You are free to travel' - if you have money

11.71 'You are free to go into a hospital to be healed', if you can pay

11.72 'You are free to pursue your dreams' - if you have no debts

11.73 In the new way of living, without money in between, only working for others, because that cannot change, we owe ourselves to others:

11.74 You are free to develop your full potential

11.75 You are free to start ventures, and to learn, if you have the capital in yourself

11.76 You are free to change careers whenever you want, we all make mistakes

11.77 You are free to take creative risks

11.78 You are free from the constant fear of precariousness

11.79 You are free to dedicate time to what matters to you

11.80 True freedom is the absence of artificial limitations.

11.81 Money is the greatest artificial, not human, limitation that exists today.

11.82 Collective Responsibility. With universal rights also come collective responsibilities, for everyone:

11.83 Always contribute 100% with your work to society as a whole

11.84 Take care of the global and common resources of everyone

11.85 Respect others and the planet in its entirety

11.86 Take part in community decisions

11.87 Help those who need help

11.88 But these responsibilities are not imposed by force. They are the natural result of a society where we all prosper together.

11.89 And What About Those Who Do Not Want to Work?

11.90 This is one of the most frequent questions. The answer has several parts:

11.91 First: The evidence from Universal Basic Income experiments carried out in many countries, including highly industrialized ones with very solid economies, shows that when basic needs are covered, people do NOT stop working. In fact, many work more; they do not want to stay at home, but work on things that matter to them, or that are classed as humanitarian and very necessary for the common good.

11.92 Second: Most work will be automated. The jobs that nobody wants to do because of risks to life will be done by machines. The jobs that remain will be those that humans WANT to do and for which they are qualified.

11.93 Third: Work becomes intrinsically motivating when:

11.94 It has meaning and purpose

11.95 You use your unique talents

11.96 You see the positive impact

11.97 You receive social recognition

11.98 You work in good conditions

11.99 Fourth: There will be some people who, for reasons of physical or mental health, genuinely cannot work. That is fine. Society can support them. We are productive enough. The truly needy must always be cared for; there will be work in searching for, identifying and caring for those in need.

11.100 Fifth: If someone simply chooses not to contribute, they will have access to basic needs (housing, food, health), but not necessarily to all goods and services. There will be natural social consequences — not punishments, but the recognition that

contribution matters. But because someone might not want to contribute in some way to this new life, one should talk with the person and try to understand and work through their reasons for not working.

11.101 How Are Scarce Resources Allocated?

11.102 Not all resources are infinite. How do you decide who gets what when there is genuine scarcity?

11.103 Option 1: A rotation system for goods such as houses in privileged locations.

11.104 You can live at the beach for a year, then you move so that others can also enjoy it.

11.105 Option 2: Priority based on need. A scientist who needs an expensive laboratory for research that benefits everyone has priority over someone who only wants it for status.

11.106 Option 3: Design for abundance. Instead of fighting over the few houses on the beach, we build more beautiful places. Instead of a single desired tourist destination, we develop many.

11.107 Option 4: Transparent community vote. For difficult decisions, the community decides democratically, with all the information available.

11.108 The key is that decisions are based on real needs, collective benefit, and justice, and not on who has more houses or goods. And here the following analysis must be insisted upon: in this new system, how many houses do you think you need to have to feel well and protected from the inclemency of nature? And we are talking about the HOUSE, with everything you can imagine in today's world, with many very functional thermal-panel windows, the whole roof full of solar panels, with cutting-edge technology, with bedrooms and bathrooms and kitchens and patios and of course a swimming pool, everything any normal person could dream of when having a house. Well, of that kind of top-of-the-line house, with everything imaginable today, well, the question for you is: how many do you need just for yourself, to feel well? Tell me, how many houses should we build just for you.....

11.109 A Society of Collaboration

11.110 The deepest change is neither technological nor economic. It is cultural, it is educational, it is moral.

11.111 In today's world, competition is the engine. You compete for jobs, for clients, for status, for limited resources, for money. 'Man is a wolf to man', a phrase popularized by Thomas Hobbes.

11.112 In the new world, collaboration is the engine. You cooperate to solve problems, to create, to improve everyone's life. 'Man is a brother to man.' This is not naive idealism. It is recognizing that:

11.113 We are a social species; look at a natural disaster and see everyone's reaction

11.114 Our greatest achievements have been collective, always, good and bad

11.115 Cooperation among us took us from the caves to the Moon

11.116 Extreme competition is a historical aberration, it is not our nature

11.117 When you remove money, you remove the greatest incentive for destructive competition.

11.118 What remains is our fundamentally cooperative nature at the root.

11.119 Human Flourishing Is Always Achieved by Working All Together

11.120 In this new world, for the first time in history, all of humanity can flourish, by helping one another with technological development and social justice for all

11.121 Every child can develop their unique potential. Every artist can create without worrying about selling. Every scientist can research without seeking funding. Every person can live a life of meaning and purpose.

11.122 Let us imagine all we could achieve:

11.123 Cure diseases that today are standard, because of the lack of economic resources

11.124 Reverse the environmental damage caused to our, for now, one home planet

11.125 Explore space, for materials that run out here on the planet

11.126 Create art that inspires present and future generations

11.127 Build vibrant and healthy communities, respecting nature

11.128 Live full and satisfying lives during your assured periods of rest

11.129 There will never again be a drug; there is no longer any business in selling poisons to addicts

11.130 All this is very possible. The technology exists. The resources exist. The human capacity exists.

11.131 The only thing missing is leaving money behind.

11.132 And leaving behind all the harm it has caused.

11.133 It Is Not Just Another Blind or Unreachable Utopia.

11.134 This vision may sound utopian. But it is not an impossible fantasy.

11.135 It is a direction. A goal. Perhaps we will never reach 100%, but every step toward it improves the lives of millions. And someday in the future it will be said, how good that the total change was made.

11.136 Even if we only achieve about 70% of this vision, we will have created a society infinitely better than the current one: healthier, fairer, more peaceful, cleaner, more compassionate and more intelligent.

11.137 The question is not whether it is the perfect utopia.

11.138 The question is: Is it better than what we have now?

11.139 And the answer is a resounding YES.

12. Chapter 6: Guidelines for a Society Without Money

12.1 Guidelines for a Society Without Money

12.2 These are the basic fundamental guidelines that govern the functioning of a society without money. They are not rigid laws, but principles that evolve with society. They can and must change for the better, always for the benefit of all.

12.3 Fundamental Guidelines on Rights

12.4 Every minor has a guaranteed right to health, food and education of the highest quality. If the family cannot provide it, the State guarantees it.

12.5 Education is free, compulsory and of excellence from preschool through the tertiary level. Each person can study whatever they are passionate about, without economic limits.

12.6 Health is a universal right. Every person receives preventive and curative medical care, regardless of their condition or work contribution.

12.7 Housing is a right. Every person is guaranteed a dignified, well-built home, in sustainably planned communities.

12.8 Food is a right. Every person has access to nutritious, varied and sufficient food, produced sustainably.

12.9 Guidelines on Work and Contribution

12.10 Every person of working age and with physical and mental capacity contributes to society through their work. Work is a form of social participation, not of survival. One must work at what one wants, and must know how to do that work well; it is always for others, by others.

12.11 At the end of their education, each person chooses their profession or trade according to their vocation and passion. The system provides guidance, but the decision is individual. Always thinking about how to contribute to the rest of the people

12.12 The working day is optimized through automation. Fewer hours are worked than in the current system, allowing a work-life balance.

12.13 Repetitive, dangerous or undesirable work is automated whenever technically possible. Humans focus on creative work, care work and supervision. AI and technology must be supervised; they always work for us humans, and we are the ones who supervise AI.

12.14 Every person can change profession or trade whenever they wish, receiving the necessary training. There is no penalty for exploring different fields.

12.15 Guidelines on Resources and Distribution

12.16 Natural resources belong to all humanity. Their extraction and use are based on sustainability and collective benefit, not on individual gain.

12.17 Production is based on real need, not on profit maximization.

12.18 What is needed is produced, in the quantity needed, without waste.

12.19 The distribution of goods and services is based on need and equitable access.

12.20 There is no unlimited individual accumulation.

12.21 For scarce goods or resources in privileged locations, transparent allocation systems are implemented: rotation, priority by need, or community vote.

12.22 Planned obsolescence is prohibited. All products are designed to last, and to be repairable, upgradable and recyclable.

12.23 Guidelines on Technology and Innovation

12.24 Artificial Intelligence and automation are used to coordinate the economy, optimize resources, and free humans from undesirable work.

12.25 All scientific and technological knowledge is in the public domain. There are no patents or trade secrets. Innovation is collaborative and open.

12.26 Scientific research focuses on human and planetary benefit, not on commercial profitability. Scientists freely choose their lines of research.

12.27 Technology must be sustainable, repairable and accessible to all. Open-source technology is always given priority.

12.28 Technological systems are transparent and auditable. AI decisions are subject to human review and oversight.

12.29 We must migrate to clean technologies, leaving behind what poisons.

12.30 Guidelines on Governance and Participation

12.31 Important decisions are made democratically with informed citizen participation. Information is available to everyone.

12.32 Power is decentralized. Decisions are made at the most local level possible, with global coordination only when necessary.

12.33 Transparency is fundamental. Everyone has access to information about production, distribution, environmental impact, and administrative decisions.

12.34 Collective responsibility exists. Those who make decisions answer to the community. There is no privileged elite.

12.35 Civic education is continuous. Every person learns to participate effectively in community decisions and to understand complex systems.

12.36 These guidelines are neither exhaustive nor immutable. They are a starting point, a base on which to build. As society evolves, these guidelines will be adjusted and refined based on experience and changing needs. Always.

12.37 What matters is not perfection from the start, but the commitment to the fundamental principles: equity, sustainability, freedom, collaboration, and universal well-being.

13. Chapter 7: Technology and Artificial Intelligence as Facilitators of Everything in Humans' Ordinary Life

13.1 Jacque Fresco and The Venus Project

13.2 I am not the first to imagine a society without money. Jacque Fresco (1916-2017), an American engineer and futurist, devoted more than 70 years of his life to developing exactly this vision: an Economy Based on the sustainable and measurable use of Resources.

13.3 Most people will not begin to think about a different social arrangement until the current one no longer serves them. Abandoning a system as deeply rooted in our culture as money will require its prior collapse. — Jacque Fresco

13.4 Fresco founded The Venus Project in Florida, where he designed circular futuristic cities, automated transport systems, and production models without money. His work was visionary but limited by the technology of his time.

13.5 What Fresco imagined in the 20th century is now possible in the 21st century. Technology has finally caught up with the vision.

13.6 The Economic Calculation Problem — Solved

13.7 In 1920, the economist Ludwig von Mises formulated what seemed like a devastating criticism of any economy without money: the Economic Calculation Problem.

13.8 His argument: Without market prices, it is impossible to rationally calculate how to allocate resources. Prices communicate information about scarcity and demand. Without them, there is chaos.

13.9 This criticism was valid... in 1920. Mr. Mises could not imagine:

13.10 The Internet of Things (IoT): sensors in every product, every factory, every field

13.11 Big Data: the capacity to process trillions of data points

13.12 Artificial Intelligence: algorithms that can optimize incredibly complex systems

13.13 Blockchain: total transparency and total traceability

13.14 Today, we can coordinate and manage a complex global economy WITHOUT the need for prices.

13.15 Here is how:

13.16 IoT: Sensors Across the Whole Production Chain, Internet of Things

13.17 (The Internet of Things)

13.18 The Internet of Things makes it possible to monitor in real time:

13.19 Inventories in global warehouses

13.20 Resource consumption in factories

13.21 Production levels and control of inputs

13.22 Use of products by consumers, by areas, by requests

13.23 State of infrastructure (roads, bridges, electrical systems, logistics)

13.24 Environmental conditions (climate, air quality, temperature)

13.25 Health of agricultural crops and the impact of the use of pesticides or poisons

13.26 Levels of natural resources

13.27 Example: A refrigerator with IoT knows how much food it contains, when it is consumed, when it needs restocking. This information is aggregated with millions of other refrigerators to predict food demand globally.

13.28 We do not need prices to know what to produce. The sensors tell us directly what is being used and what is needed.

13.29 Big Data:

13.30 Information processing is massive and very fast, since modern systems can process a great deal of information in fractions of real time

13.31 Consumption patterns of billions of people

13.32 Seasonal fluctuations and long-term trends

13.33 Complex correlations between variables

13.34 Environmental impacts of each production decision

13.35 Efficiency of different production methods

13.36 This allows decisions to be made based on real data, not on market speculation.

13.37 Artificial Intelligence: Complex Optimization, since AI can, as an example:

13.38 Predict future needs with precision

13.39 Optimize distribution routes to minimize waste

13.40 Coordinate global production of millions of products

13.41 Adjust in real time to changes (natural disasters, changes in demand)

13.42 Identify inefficiencies and propose improvements

13.43 Balance multiple objectives: efficiency, sustainability, equity

13.44 Concrete Example: DeepMind's AlphaFold can predict protein structures, something that took years of human work. The same AI can optimize global supply chains.

13.45 AI does not replace human decision-making. It provides information and options, at a speed ratio of 1 to 1,000,000. Humans decide the objectives and supervise the process; AI speeds up the development of everything as no one could ever have imagined, and we have this incredible and unique opportunity to see the change, in whatever lifetime we have left in this world of ours.

13.46 Blockchain: Transparency and Traceability

13.47 Blockchain makes it possible to:

13.48 Track each product from its origin to the consumer

13.49 Verify that resources are used as planned

13.50 Prevent corruption and abuse

13.51 Give public access to information on production and distribution

13.52 Coordinate without the need for a central authority

13.53 The whole value chain is visible. If there is waste or inefficiency, it is detectable immediately. And then correction and final creation of the flow proceed.

13.54 How the Integrated System Works

13.55 Let us imagine the complete flow, for example wheat:

13.56 MONITORING: IoT sensors detect that wheat consumption is increasing in a certain region.

13.57 ANALYSIS: The AI analyzes the trend, correlates it with other data (climate, population, preferences), and predicts future need.

13.58 DECISION: The system proposes increasing wheat production on nearby farms, or redistributing from areas with a surplus.

13.59 COORDINATION: Automated systems adjust agricultural production. Autonomous tractors sow more wheat. Irrigation systems are activated.

13.60 PRODUCTION: Robotized farms grow the wheat with minimal waste of water and energy.

13.61 DISTRIBUTION: Autonomous vehicles transport the wheat to processing centers and then to distribution points.

13.62 VERIFICATION: Blockchain records each step, ensuring there is no waste or diversion.

13.63 FEEDBACK: The sensors monitor actual consumption versus predicted, and the system learns and adjusts. All this without a single cent exchanged. Without speculation. Without intermediaries seeking profit. Only real need and efficient response. This is the use of technology.

13.64 Automation: Liberating Humanity

13.65 Mass automation is not a threat. It is the opportunity to free ourselves from unwanted, dangerous, deadly work. It should be understood as liberation that generates more time for us

13.66 Current Data:

13.67 Goldman Sachs: 300 million jobs globally could be automated with AI

13.68 The United Kingdom lost 8% of jobs to AI in just 12 months

13.69 World Economic Forum: AI will create 170 million jobs, but will first destroy 92 million. (conversion and restart)

13.70 In the current system, this is a crisis. In a system without money, it is liberation.

13.71 What to Automate

13.72 Jobs to Automate Completely:

13.73 Repetitive manufacturing

13.74 Agriculture (planting, harvesting, processing)

13.75 Cleaning and maintenance

13.76 Freight transport

13.77 Inventory management

13.78 Dangerous work (mining, construction and work at height)

13.79 Repetitive administrative tasks

13.80 Jobs to Assist with AI (not replace):

13.81 Medicine (assisted diagnosis, but a human doctor decides)

13.82 Education (personalization, but a human teacher teaches)

13.83 Research (data analysis, but a human scientist leads)

13.84 Art (creative tools, but a human artist creates)

13.85 Counseling and care (support, but a human provides empathy)

13.86 Inherently Human Jobs:

13.87 Care of children, the elderly, the sick (requires genuine empathy)

13.88 Creative and artistic work

13.89 Leadership and ethical decision-making

13.90 Building relationships and community

13.91 Philosophy, ethics, exploration of meaning

13.92 Voices of the Present

13.93 I am not the only one who sees this possibility. Mainstream voices are recognizing that change is inevitable and necessary:

13.94 There is a high chance we end up with a universal basic income, or something like it, due to automation. Work could become optional. — Elon Musk

13.95 If a robot replaces the work of a human, that robot should pay taxes like a human. — Bill Gates

13.96 Sam Altman, CEO of OpenAI, funded a 3-year study on Universal Basic Income. The results: less stress, better mental health, more entrepreneurship. And this was WITH money.

13.97 Legitimate Concerns About AI

13.98 It is important to address the legitimate fears:

13.99 Concern 1: 'What if AI takes control and dominates us?'

13.100 Answer: AI systems are tools, not autonomous entities. They are designed with specific objectives and under constant human supervision. Final decisions are always made by humans. AI proposes very logical options, but we decide.

13.101 Concern 2: 'What if there are errors or system failures?'

13.102 Answer: Redundancy and backup systems. If one system fails, others take over. In addition, humans supervise constantly. Technology is a tool, not an infallible dictator. At the beginning, all AI is observed as it develops inside a sandbox, from which it cannot escape, and it is supervised there by humans.

13.103 Concern 3: 'What if someone hacks the system?'

13.104 Answer: Distributed security and blockchain make the system much safer than the current banking system. Besides, with no money to steal, the incentive to hack decreases dramatically. Without money one has to see what they might try to steal, but as never before, precisely, those people expose themselves to severe legal penalties; there is no longer a justification that someone is trying to survive; it is not valid in the new way of life for humanity.

13.105 Concern 4: 'What if we lose human skills?'

13.106 Answer: Automation frees up time to develop truly human skills: creativity, empathy, critical thinking. We do not lose skills, we elevate them.

13.107 The Technology Is Ready. Are We?

13.108 All the technological components exist today:

13.109 IoT: Billions of sensors already deployed

13.110 Big Data: Supercomputers that process petabits of information

13.111 AI: Algorithms that outperform humans in specific tasks

13.112 Blockchain: Decentralized networks operating globally

13.113 Automation: Robots making cars, drones delivering packages

13.114 Renewable Energy: Solar and wind, increasingly efficient and cheap

13.115 Technology is not the obstacle. The obstacle is the political and social will to make the change.

13.116 Jacque Fresco had the vision, but not the technology. Today we have both.

13.117 It is our moment.

14. Chapter 8: The Practical Transition: How We Get from Here to There

14.1 This is the most important chapter of the book. The vision is beautiful, but without a practical and real path to reach it, it is only a fantasy, and it will demand a lot of time and intelligence.

14.2 So, in order to begin calmly and intelligently, we must say:

14.3 The transition will NOT be:

14.4 A violent revolution

14.5 A change overnight

14.6 Imposed by some dictator

14.7 An isolated experiment in a single country

14.8 The transition WILL be:

14.9 Gradual, orderly and planned

14.10 Coordinated globally, but implemented locally

14.11 Based on evidence and pilot experiments, country by country, area by area

14.12 Participatory and democratic, always

14.13 Reversible if something goes wrong (let us be winners without fear, for once)

14.14 This process will take several years, more or less about 6 to 10 years approx., with 3 main phases

14.15 PHASE 1: PREPARATION

14.16 Objective: To build the technological and social infrastructure for the new system.

14.17 Global Resource Inventory

14.18 Before eliminating money, we must know exactly what we have:

14.19 Complete mapping of natural resources: water, minerals, arable land, renewable energy

14.20 Census of productive capacity: factories, farms, infrastructure

14.21 Assessment of population needs: housing, health, education, food

14.22 Analysis of current flows: how resources and products move

14.23 Identification of waste: where we are being inefficient. This information is made public and transparent for everyone.

14.24 Global Technology Platform

14.25 Construction of the digital infrastructure that will coordinate the economy:

14.26 System of IoT sensors in factories, farms, warehouses, transport

14.27 AI platform for analysis and optimization

14.28 Blockchain for transparency and traceability

14.29 Global high-speed communication networks

14.30 Public interfaces so that everyone can see how the system works

14.31 This is not science fiction. The technology exists. It only needs to be coordinated.

14.32 Mass Education

14.33 The most important change is not technological, it is mental:

14.34 Educational campaigns on how the new system will work

14.35 Refutation of common myths and fears

14.36 Explanation of the science and technology behind it

14.37 Stories of successful experiments

14.38 Citizen participation in the design of the system

14.39 Education must be honest. Do not hide challenges. But show that they can be solved.

14.40 Local Pilots

14.41 Before implementing globally, test on a small scale:

14.42 Volunteer cities experiment with versions of the new system

14.43 Regions with abundant resources test first

14.44 Intentional communities serve as laboratories

14.45 Successes and failures are documented

14.46 The system is adjusted based on what is learned

14.47 The AI pilots show that it is possible. They generate real data. They create models to follow.

14.48 PHASE 2: MIXED DUAL TRANSITION

14.49 Objective: Coexistence of both systems while the new one grows and the old one withers.

14.50 Universal Basic Income as a Bridge

14.51 During the transition, UBI is implemented to stabilize:

14.52 Every person receives a guaranteed monthly income, which has already been proposed and in some countries was carried out for the COVID crisis

14.53 Enough to cover basic needs monthly

14.54 Financed by measures to be coordinated and by automation

14.55 Reduces dependence on work for survival

14.56 Allows people to explore new roles

14.57 UBI is not the final goal. It is a bridge. It reduces fear of change.

14.58 Accelerated Automation

14.59 Massive investment in automating jobs:

14.60 Priority to dangerous, repetitive, undesirable jobs

14.61 Robots in manufacturing, agriculture, logistics

14.62 AI in data analysis, administration, diagnosis

14.63 Autonomous vehicles for transport

14.64 Automated construction systems

14.65 Paradoxically, the automation that threatens jobs in the current system is what makes the system without money possible.

14.66 Progressive Free Access

14.67 Services become free gradually:

14.68 Universal and free health care

14.69 Free education at all levels

14.70 Totally free public transport

14.71 Free basic services (water, electricity, internet)

14.72 Free basic foods

14.73 Quality social housing expanded to everyone who needs a home

14.74 More categories of goods become free

14.75 A system of non-accumulable credits for non-essential goods

14.76 Gradual reduction and elimination of the use of money

14.77 As more things become free, the need for money decreases. Money gradually becomes irrelevant. Which is where we must go

14.78 Reorientation of Work

14.79 Work is transformed:

14.80 Working hours are reduced (30 hours, then 25, then 20)

14.81 Work becomes more vocational and, in a controlled way, optional

14.82 Massive job retraining programs

14.83 Community and care work is recognized and given priority value

14.84 Retirement as a separate topic of importance and impact for all of society. It is a delicate topic and central to people's quality of life. It must be legislated professionally with a different final approach, since, just as there are millions of people globally of an age to stop working, very many variables and causes must be defined. In addition, very many people do not wish to stop producing, since they enjoy what they do and their bodies and minds support them, and other people cannot continue for different, varied, valid and unique reasons. Each case must be looked at individually.

14.85 The goal is not to eliminate work. It is to make work meaningful and optional.

14.86 International Coordination

14.87 The change must be coordinated globally: Let us use the bodies that already exist

14.88 International treaties on resource-based economy

14.89 Exchange of resources between regions without monetary intermediaries

14.90 Coordination of technological systems

14.91 Migration to a common (non-monetary) measurement system

14.92 Peaceful resolution of conflicts over resources

14.93 The countries that adopt the system first trade with each other in a special way. Eventually, more join.

14.94 PHASE 3: POST-MONETARY

14.95 Objective: Complete elimination of money. A fully functional resource-based economy.

14.96 Completely Automated Production

14.97 By this point:

14.98 90%+ of basic production is automated

14.99 AI coordinates global supply chains

14.100 Humans only in creative, supervisory, or care roles

14.101 Abundance of basic goods guaranteed

14.102 Production optimized for sustainability

14.103 Distribution Based on Need

14.104 Distribution system:

14.105 Free access to all basic needs

14.106 Rotation system for scarce goods

14.107 Democratic prioritization of resources

14.108 Total transparency in resource flows

14.109 Continuous feedback to the system

14.110 Work as Vocation

14.111 The relationship with work has changed completely:

14.112 Working is optional but highly valued and with high reward

14.113 People work out of passion, purpose, contribution

14.114 Social recognition replaces monetary compensation

14.115 Total flexibility in choosing and changing jobs

14.116 Healthy work-life balance for everyone

14.117 Participatory Governance

14.118 Important decisions are made democratically:

14.119 Digital platforms for mass participation

14.120 Complete information available to all

14.121 Direct voting on important issues

14.122 Representation by consensus in technical decisions

14.123 Absolute transparency in and of governments

14.124 Challenges and How to Face Them

14.125 Let us be honest. There will be challenges. Here are the main ones and how to resolve them:

14.126 Challenge 1: Resistance from Economic Elites

14.127 those who have a great deal of money will raise the question of what to do with all that money accumulated over generations. They do not want to lose it; they will think they can still buy something. As far as I am concerned, let them keep it in gigantic vaults, but let them know that nothing is sold or bought anymore, and if one of them says something like that in these very days he was about to buy a super yacht, let him wait in line meanwhile; some day the company that makes super yachts will notify him to come and pick up his, some day, with luck.

14.128 Solution: Mass social movements. Political pressure. Demonstrations that the current system is collapsing. Offer them a role in the new society, of course; those people have a place in the chain of life of this new society. We need their contributions, their knowledge and the work they themselves wish to do for all the other humans (as architects of the transition, not as the last emperors).

14.129 Challenge 2: Fear of Change

14.130 Solution: Education, transparency, successful pilots. Show that the new system works. Make the transition gradual, not abrupt. Allow reversibility if something goes wrong.

14.131 Challenge 3: Global Coordination

14.132 Solution: Start regionally (EU, Nordic countries). Expand by example. Create alliances. Use technology for coordination. Do not force anyone, inspire.

14.133 Challenge 4: Justice and Enforcement of Laws

14.134 Solution: No one, but no one, is above the laws. The constitution, criminal, civil and family law are maintained and perfected, and when money disappears, thousands of crimes disappear. Each country or region competes with the others in creating the best and most rehabilitative laws possible. Those who committed horrendous crimes for psychiatric or medical reasons must be separated from those who committed crimes for or because of money, whatever the reason, but progress must be made toward reintegrating the human being at all costs.

14.135 Challenge 5: Technological Failures

14.136 Solution: Redundancy. Backup systems. Constant human supervision. Do not depend on a single system. Maintain manual capabilities during the transition.

14.137 Challenge 6: Inequality During the Transition

14.138 Solution: UBI guarantees a minimum floor. Progressive expansion of access. Prioritize the most vulnerable. Transparency in distribution.

14.139 The Role of Citizens

14.140 This will not be done by governments alone. Nor by companies. Nor by benevolent elites. We will do it all together.

14.141 What you can do:

14.142 Educate yourself on the subject. Read, investigate, question

14.143 Talk with others. Spread the ideas

14.144 Join social movements that support systemic change

14.145 Vote for politicians who support these ideas, this with great care

14.146 Take part in and encourage pilot experiments if there is an opportunity

14.147 Live the values of the new system: cooperation, generosity, community, barter

14.148 Support organizations working on this (The Venus Project, UBI movements)

14.149 Change begins with awareness. Then organization. Then action

14.150 The Transition Is Inevitable

14.151 Here is the uncomfortable truth for those who want to maintain the status quo:

14.152 Automation is going to destroy millions of jobs. That is inevitable. The climate crisis is going to force radical changes. That is inevitable. Inequality is going to create social instability. That is inevitable. (That instability already exists)

14.153 The current system is collapsing. The question is not IF it will change, but HOW it will change.

14.154 We can:

14.155 1- Let it collapse chaotically with very high mass suffering

14.156 2- Try patches that only postpone the inevitable, with a great loss of time

14.157 3- Or plan an orderly transition toward the best that is coming, which can be and will begin to be seen with the test of the main idea in isolated communities, islands, reserves, etc., which report the result of the experience, which will help the rest of us.

14.158 The third option is the only sensible one. And it is in our hands.

15. Chapter 9: Frequently Asked Questions and Objections

15.1 The following are the most common questions and objections. I answer them honestly and as best I can within my education and understanding of what we are living through:

15.2 Q1: Is this communism or Marxism-Leninism? We already tried that and it failed.

15.3 A1: No, it is not communism, socialism or whatever it was called. The key differences are:

15.4 There is NO party dictatorship. There is participatory democracy

15.5 There is NO central planning by bureaucrats. There is coordination by AI with strong human supervision and general consensus

15.6 There is NO repression of freedom. There is an expansion of real freedom

15.7 There is NO global isolation. There is international coordination

15.8 It is NOT attempted without technology. We have AI, IoT, automation, and high technology

15.9 Twentieth-century communism failed because it did not have the technology to coordinate itself, nor the intention to achieve results for everyone equally; they also embarked on the selfishness of power.

15.10 Q2: What happens if nobody wants to work?

15.11 A2: First, the evidence shows that people do NOT stop working when their needs are covered. UBI experiments confirm it.

15.12 Second, most work will be automated. What remains are jobs that humans WANT to do: creative, care, research, development, maintenance.

15.13 Third, there will be natural social consequences for whoever does not contribute: less access to non-essential goods, less social recognition. Not punishments, but consequences nonetheless.

15.14 Fourth, if someone genuinely cannot work for physical or mental health reasons, that is fine.

15.15 The rest of society can support them.

15.16 Q3: How are scarce goods such as beach houses allocated?

15.17 A3: There are several options: Rotation system: you live there for a year, then someone else has their turn

15.18 Priority by need: if you need to be near the sea for health reasons, you have priority (fortunately not everyone wants to live at the beach)

15.19 Community vote for complex cases

15.20 Design for abundance: build more desirable places, do not fight over the few that exist (just look up how many kilometers of coastline there are in the world, with no humans for hundreds of thousands of kilometers around)

15.21 The key: decisions are based on need and justice, not on who has more money. Because the famous money no longer exists (remember)

15.22 Q4: What incentive is there to innovate without monetary gain?

15.23 A4: History shows that innovation is NOT always motivated by money:

15.24 Tim Berners-Lee invented the World Wide Web and made it free

15.25 Jonas Salk created the polio vaccine and refused to patent it

15.26 Marie Curie openly shared her research on radioactivity

15.27 I write this book or manual for free, I do not need money for it

15.28 Contributors to Wikipedia, Linux and open-source software work for free

15.29 The real incentives to innovate are:

15.30 Solving problems you are passionate about

15.31 Social and professional recognition

15.32 Intellectual curiosity

15.33 The desire to contribute to the common good and the satisfaction of achievement for all of us

15.34 Moreover, in a system without money, innovators have unlimited resources for their projects. They do not need to look for funding or convince investors.

15.35 Q5: Would this not destroy individual freedom?

15.36 A5: On the contrary, it expands it dramatically.

15.37 Current freedom (with money):

15.38 You are 'free' to choose your job... if you have education and opportunities and contacts

15.39 You are 'free' to travel... if you have money, and on your own, or with a lifelong loan

15.40 You are 'free' to pursue dreams... if you have no debts to pay

15.41 Real freedom (without money):

15.42 Freedom to develop your full potential

15.43 Freedom to change careers without risk

15.44 Freedom to take creative risks

15.45 Freedom from the constant fear of precariousness

15.46 Money is an artificial limitation. Eliminating it expands freedom.

15.47 Q6: Who does the jobs nobody wants?

15.48 A6: The machines.

15.49 Heavy agriculture: autonomous tractors, drones. Cleaning: robots. Repetitive manufacturing: robots. Dangerous mining: robots. Freight transport: autonomous vehicles.

15.50 The jobs that CANNOT be automated are typically those that people DO want to do: creative, care, human connection, creative work in medicine, animal care, food technology research and industrial production, development, maintenance.

15.51 And many more, and many more created by AI for ourselves.

15.52 Q7: How does international trade work?

15.53 A7: The change must be global or at least regional. The countries that adopt the system trade freely among themselves based on the exchange of resources, not money. For example, Latin America has everything to exchange among its own countries and a surplus for the rest of the world.

15.54 Example: Region A has an excess of wheat, but needs copper. Region B has copper, but needs wheat. AI coordinates the direct exchange without money in between.

15.55 For countries that still use money, there will be a transition period with hybrid trade. Eventually, the system without money expands globally.

15.56 Q8: Would this not lead to laziness and decadence?

15.57 A8: The evidence says the opposite. When basic needs are covered:

15.58 People have MORE energy to be productive, not less

15.59 Stress decreases, mental health improves

15.60 People pursue passions and develop talents

15.61 Entrepreneurship increases (UBI experiments show it)

15.62 'Laziness' is typically a symptom of depression, exhaustion, or lack of meaning. In a society where work is vocational and meaningful, it disappears.

15.63 Q9: What if there are technological failures or hacks?

15.64 A9: Several levels of protection:

15.65 Redundancy: multiple backup systems

15.66 Decentralization: not a single point of failure

15.67 Constant human supervision

15.68 Manual capabilities maintained during the transition

15.69 Blockchain makes systems safer than current banks

15.70 Furthermore, with no money to steal, the incentive to hack decreases enormously.

15.71 Q10: How is all this financed during the transition?

15.72 A10: Very high progressive taxes on the ultra-rich

15.73 Taxes on automation (robots pay 'taxes')

15.74 Recovery of wasted resources: the speculative financial sector, mass advertising, duplication due to competition

15.75 Controlled issuance of currency during the transition

15.76 Redistribution of military budgets to social infrastructure

15.77 The money is there. The problem has never been a lack of resources. It is distribution.

15.78 Q11: Does this not violate human nature?

15.79 A11: 'Human nature' is not fixed. It is adaptable. We can adapt to anything.

15.80 Yes, humans can be selfish and competitive. But we are also cooperative, empathetic, altruistic. Which side predominates depends on the context.

15.81 In a system that rewards selfishness, we see selfishness. In one that rewards cooperation, we see cooperation. It is not mysterious.

15.82 Anthropological evidence shows that for most of human history we lived in cooperative and communal societies. Hyper-individualism is recent.

15.83 Q12: Is this not too utopian?

15.84 A12: Utopian means 'a place that does not exist'. But everything that exists today once did not exist. Today everything a human needs exists, EVERYTHING. Just think about it alone and try to imagine something, anything you truly need to survive; it already exists.

15.85 Democracy was utopian. The abolition of slavery was utopian. Women's rights were utopian. Space travel was utopian. The Internet was utopian.

15.86 The question is not whether it is utopian. It is whether it is possible. And it is.

15.87 The technology exists. The resources exist. You exist. The only thing missing is collective will.

15.88 A Final Reflection

15.89 Every serious objection can be answered. Every challenge has a solution. Every fear can be faced. The truth always triumphs, no matter how long they cover it up.

15.90 The real question is not whether we can do this. It is whether we want to go on as we are.

15.91 Because what we have now — extreme inequality, environmental destruction, wasted lives, unrealized human potential, and the abuse of man by man — THAT is unsustainable, not for much longer, and moreover, we already have the solution already waiting for us.

15.92 Change is not optional. It is inevitable. It must be carried out soon, I assure you.

15.93 The only question is: Will we guide the change or let it drag us along? Will we be part of this change, will I make some contribution? Will we be part of this change, or do I prefer that the others break their backs while I wait to be told that the change is ready, and then go and enjoy the new society without money.....

15.94 If everyone thinks that way, of not helping the change, you are going to die and not see the change, take it as done. Instead, I invite you from the heart to take part to whatever extent or in whatever way you can, and perhaps those of us who are still alive today will begin to see this change, so necessary after so much misery and suffering and deaths caused by money. I tell you this from the depths of my soul.

16. PART 3: THE CALL TO ACTION

17. Chapter 10: What Each Person Can Do

17.1 This book is not only for reading.

17.2 It is a call to action, to think and imagine and to try to help, with all the soul and the human spirit that distinguishes us from other species and perhaps brings us closer to other species.

17.3 Here is something of what you can do, regardless of who you are, and this idea is for all of us, and everyone is invited to contribute what they consider relevant to the idea:

17.4 Educate Yourself and Question Everything

17.5 Read about alternative economies (The Venus Project, UBI, resource economics), ask AI, several of them, all of them

17.6 Study the history of successful social movements

17.7 Learn about technology (AI, automation, blockchain)

17.8 Question the dominant narratives about 'human nature' and the 'end of history'

17.9 Speak Up and Spread the Word, just like the hours and hours you spend on social media, use them for this

17.10 Share this book with friends, family, colleagues

17.11 Start conversations about alternatives to capitalism. Use social media responsibly to spread ideas. Do not be discouraged if you face skepticism. Plant seeds. Let us get out of this trap, together we can

17.12 Join and Organize

17.13 Look for local movements working for systemic change

17.14 Connect with global organizations (Zeitgeist Movement, UBI groups)

17.15 Form study circles to deepen understanding collectively

17.16 Organize events, talks, documentary screenings, create whatever helps people learn about this idea of change

17.17 Vote and Press

17.18 Vote for politicians who support structural changes

17.19 Press current representatives to consider UBI and automation taxes

17.20 Support referendums and progressive citizen initiatives

17.21 Take part in protests and social movements when necessary

17.22 Live the Values

17.23 Practice cooperation instead of competition

17.24 Share resources with your community

17.25 Prioritize meaning over accumulation

17.26 Take care of the planet in your daily decisions

17.27 For Workers and Employees

17.28 Join unions or form one if none exists

17.29 Fight for a shorter working day without a reduction in benefits

17.30 Support coworkers who are exploring new roles or careers

17.31 Take part in cooperatives or worker-owned companies when possible

17.32 Do not accept the narrative that 'that's just how things are'

17.33 For Students and Young People

17.34 Organize in your schools and universities

17.35 Study careers related to AI, automation, complex systems

17.36 Use your creativity to imagine and design the future

17.37 Do not accept this 'realism' that is only consumerism at its maximum expression

17.38 Remember: it is your future. You have the right to shape it and bring about the change

17.39 For Scientists and Engineers

17.40 Work on economic coordination technology

17.41 Develop AI for resource optimization, not for selling ads

17.42 Contribute to relevant open-source projects

17.43 Publish research openly, not behind paywalls

17.44 Use your technical expertise to show the viability of change

17.45 For Artists and Creatives

17.46 Create art that inspires the imagination of other possible worlds

17.47 Tell stories of cooperation and solidarity

17.48 Use your platform to amplify messages of change

17.49 Show the beauty of a united humanity

17.50 For Business Owners and Entrepreneurs

17.51 Experiment with cooperative and non-profit models

17.52 Treat employees well, pay fair wages while the current system exists, support the change, which will bring benefits to all

17.53 Invest in automation that frees humans, not that exploits them

17.54 Share knowledge and resources openly

17.55 Recognize that the current system is unsustainable even for you

17.56 For Politicians and Public Officials

17.57 Propose and support legislation on UBI, progressive taxes, regulation of automation, aimed at leaving the use of money behind

17.58 Fund pilot experiments of alternative economies, without the use of money

17.59 Be honest about the limitations of the current system

17.60 Lead with a long-term vision, not only electoral cycles

17.61 Coordinate internationally with other leaders who share this same idea

17.62 For People with Economic Resources

17.63 If you have money, a lot of money and power,

17.64 Fund research into alternative economies

17.65 Support organizations working on this systemic change

17.66 Use your platform to amplify these ideas

17.67 Recognize that the current system is unsustainable even for you

17.68 Be part of the solution, not of the problem

17.69 You have a historic choice: to be remembered as the last ones who defended a dying system, or as the first ones who, although they live very well from money, know that this change is very necessary and who helped build a new and better one for the rest of humanity.

17.70 For Fathers and Mothers

17.71 Educate your children with values of cooperation, not competition

17.72 Teach them to question the status quo, which today uses money

17.73 Show that another world is possible, without money

17.74 Fight for their future, not to maintain the past

17.75 For the Elderly and Retirees

17.76 Share your wisdom and historical experience

17.77 Support the younger generations who will lead the change, without money

17.78 Testify about how the current system has failed, because of the use of money

17.79 Do not be cynical. Recognize the enormous failure of this system of the use of money

17.80 The Power of the Collective

17.81 Individually, we are weak. Collectively, we are unstoppable.

17.82 The great changes of history were not made by solitary individuals. They were made by movements of millions.

17.83 The abolition of slavery. Women's suffrage. Civil rights. LGBTQ+ rights. All these changes seemed impossible... until they were not.

17.84 This change will be the same. It will seem impossible until suddenly it is inevitable.

17.85 Your participation matters. Your voice matters. Your action matters.

17.86 Do not wait for others to lead. Lead yourself in your sphere, with those you can, give them this idea

17.87 Do not wait for it to be easy. It never will be. But you must do it

17.88 Do it because it is necessary. Because it is just. Because it is possible.

17.89 The future is not written. We write it ourselves, together, now.

17.90 Let us work together to realize this much-needed idea; every contribution will help build the new life, the new humanity without money. I beg you, help me, and it is for yourself.

18. Epilogue

18.1 The Future Awaits Us, a Little Farther Ahead on the Road

18.2 This book began with my personal story. With the memory of my mother working from the age of 12, cleaning hallways. With the memory of my father without work. With the late realization that money was always the problem, in giving my own family, my wife and my four children, a better life, a better education, a better future, but I could not; my effort was not enough, no matter how hard I tried, it could not be done. The other way was to steal or traffic, but I know I will never do that; my parents taught me super clearly what one should or should not do in this life, and I am super grateful for all that education I received in my parents' humble home.

18.3 But this book is not only about the past. It is about a great future.

18.4 It is about a future where no child grows up in poverty. Where no mother has to choose between working three jobs or spending time with her children. Where no father feels like a failure because the economic system has left him behind.

18.5 It is about a future where each person can develop their full potential. Where talent is not wasted for lack of opportunities. Where human creativity flourishes without the chains of economic need.

18.6 It is about a future where we cooperate instead of compete. Where we build together instead of fighting over crumbs. Where one person's success does not require another's failure.

18.7 It is about a future where technology serves us, not dominates us. Where automation liberates, not terrifies. Where AI only coordinates and researches, it does not control.

18.8 It is about a future where the planet is not exploited but cared for. Where we produce sustainably. Where future generations inherit a livable world.

18.9 That future is possible. It is not a fantasy. It is a realistic option within our reach.

18.10 A Message for the Skeptics

18.11 I know many will read this book with skepticism. 'Too idealistic,' they will say. 'Human nature does not change,' they will argue. 'The current system, with all its flaws, is the best we can achieve,' they will claim.

18.12 To you I say: Your skepticism is understandable. But ask yourselves: Is it really realistic to continue as we are?

18.13 Is it realistic to believe we can maintain extreme inequality indefinitely without social collapse? Is it realistic to think the planet will tolerate our unlimited exploitation? Is it realistic to assume that automation and AI will not fundamentally change work and life as we know it today?

18.14 What is truly unrealistic is to believe that this status quo is sustainable.

18.15 I ask you: Keep your skepticism, but apply it to the current system as well.

18.16 Question everything, including what you have always taken for granted.

18.17 A Message for the Believers

18.18 To those who read this book and felt hope, I say: That hope is valuable. Protect it. But do not stay only in hope.

18.19 Act. Organize. Educate. Lead. Push the change toward this idea.

18.20 Do not wait for someone else to do the work. You are that someone else.

18.21 Be patient but persistent. Change will take time. There will be setbacks. There will be frustration. But every small action adds up. Every conversation matters. Every person convinced is a victory. It is day by day; in the end the week comes, and the month, and at the end of the year you look back at the past.

18.22 A Message for the Powerful of Money

18.23 To those who have power, whether economic, political or social — I speak to you with great respect, but with tremendous firmness in my soul:

18.24 You have a historic choice to make.

18.25 You can resist the inevitable change. You can cling to power and wealth while the world burns. You can be remembered as the last emperors of a system that destroyed life on Earth. Just to gather more money in the vault, in the bank accounts, in your home.

18.26 Or you can lead the change. You can use your power to facilitate the transition. You can be remembered as the architects of a new era of human prosperity.

18.27 Time is running out. History is watching you. What will you choose?

18.28 A Message to Myself:

18.29 I am not an economist. I am not a politician. I am not the leader of any movement.

18.30 I am someone who saw his mother work to exhaustion for a salary that was not enough. I saw my parents die, and they had not one peso more than what they had in the pockets of their clothes.

18.31 Someone who saw the wasted talent of my children for lack of opportunities. Someone who saw lives broken by a system designed to benefit a few at the expense of many.

18.32 This book is my contribution. My way of working for the change I want to see. My way of honoring all those who suffered and died under the current system.

18.33 If this book plants a seed in one mind. If it inspires one person to act. If it contributes something, however small, to building a better world …….. ... then it will have been worth it.

18.34 The Future Begins Today

18.35 The future is not something that happens to us. It is something that comes, and that we create.

18.36 Every decision we make. Every action we carry out. Every word we speak. All of them shape the future.

18.37 What future are we creating?

18.38 One where we keep following the old rules of money until everything collapses?

18.39 Or one where we have the courage to imagine something better and the determination to make it real?

18.40 I choose the second. I hope you do too.

18.41 The future awaits us. Not as an inevitable destiny, but as an open possibility.

18.42 It is up to us to make it brilliant.

18.43 The Last Word

18.44 If you remember anything from this book, let it be this:

18.45 A new humanity without money is not only possible. It is necessary.

18.46 It is not an unattainable utopia. It is the next logical stage of our social evolution.

18.47 And it is in our hands, in ourselves, to make it a reality.

18.48 Now we only have to do it; a very different future awaits us.

19. Appendix: Resources for Going Deeper

19.1 'The Choice Is Ours' (2016) - The Venus Project

19.2 'Paradise or Oblivion' (2012) Books:

19.3 'El Mejor Dinero Es el Que No Se Imprime' - Jacque Fresco (Spanish title as cited by the author)

19.4 'The Great Transformation' - Karl Polanyi

19.5 'PostCapitalism' - Paul Mason

19.6 'The Culture' series - Iain M. Banks (science-fiction novels; the first is 'Consider Phlebas', 1987)

19.7 'Utopia for Realists' - Rutger Bregman Organizations:

19.8 The Venus Project (thevenusproject.com)

19.9 Zeitgeist Movement (thezeitgeistmovement.com)

19.10 Universal Basic Income - multiple local organizations

19.11 Always stay informed. Keep investigating, talk about it.

19.12 And please, never stop questioning this obsolete system of money.

19.13 'Zeitgeist: Moving Forward' (2011)

19.14 It is now the time to use AIs.

20. Invitation to Collaborate

20.1 I need you to take this idea as open source and add your contributions, with more points of view, more questions, more solutions, more variables to the final equation. More people with good thoughts are needed, because this idea is from everyone for everyone, and your responsible and respectful contribution is very necessary. We can all work for everyone, as has always been the case in the history of our humanity, and now this change needs to be carried out for everyone. Together we can, as when an apocalyptic catastrophe occurs. At that moment we save each other; well, that is what this idea is about. Platforms or websites must be created to channel, filter, organize and build the AI with all this data, since this first phase will be the platform of the new total system of life, without money, of this new society. I do not know how to do it, but I am sure there are very many professionals capable of generating the first tools that deliver the foundations to the most qualified, of that group called to create the new system, creating a flow from the macro to the micro. And I know it can be achieved, with the technology that exists today, which humanity already has at its disposal. Only a first step is missing, of the many we must take to achieve it. It is not utopian, it is real and possible. I know someone will say, "I am not going to lose my money, which cost me so much to have, I do not accept it in any way"

20.2 I say to you, "Do not worry, do whatever you want with your money, we do not need it" at all, the new system runs without money.

20.3 In the new system we do not need money, we only need intelligence, education, fraternity, peace, work, tranquility, patience, honor, decency and love for others, who are humans just like me, like you, like your loved ones, like everyone else.

20.4 If someone with knowledge joins another person who also knows something, and together they create a website with universal access for everyone, and so a step is taken so that everyone knows about this idea, which is going to change our lives,

something like that occurs to me as a start. Or if you know that it should start in another way, do it and tell everyone else, and let the rest of us know. More contributions in ideas and developments are needed to make this idea a reality. Contribute what you can, with the idea you contribute in a constructive and respectful manner, always forward, never again backward, never again using money, only using ideas, with enthusiasm, and the change toward a new humanity without money.

21. Final Words

Please, let us come out of the caves again, and look beyond, so that we may see that one can live differently and better, in a new society without money in between. It only requires doing the same as before, but with another meaning, with a new and vital meaning for others, and at the end of the day, for ourselves. In addition, the contribution of a great many people will be needed, all the most capable, among many others: all the architects, engineers, lawyers, doctors, scientists, teachers, psychiatrists, psychologists, academic experts in AI, ETC. In short, all those who agree with this project or system change, willing to contribute their knowledge and experience in order to write and draft the new guidelines or doctrines or whatever the new rules for living and living together among all of us humans should be called, using the high technology and AI that we already have, for the better and healthier life that we have deserved for a very long time. Enough of so much pain, frustration and injustice, in addition to all the deaths caused, in every country of the planet, for all kinds of reasons, natures and moments, because of money. This money must be replaced by only the will to live for others, with others, helping each other with the technology that already exists, so that with more time to live more and better, enjoying life, which in reality is only a very short moment of time, and always, but always remember that after everything, death comes.

So, do you think the effort of making the change will be worth it? I know that it is

22. My Eternal Thanks

Thank you so very much to my parents, to my partner, to my children, to my brothers and sisters, to my friends, to the family I come from, and I still have so many on both my father's and my mother's side, and of course to all of our humanity. And I am not worried that in other languages or tongues they may not understand me; all of this idea will soon be known in every part of our home planet.
